

# Astro-COLIBRI

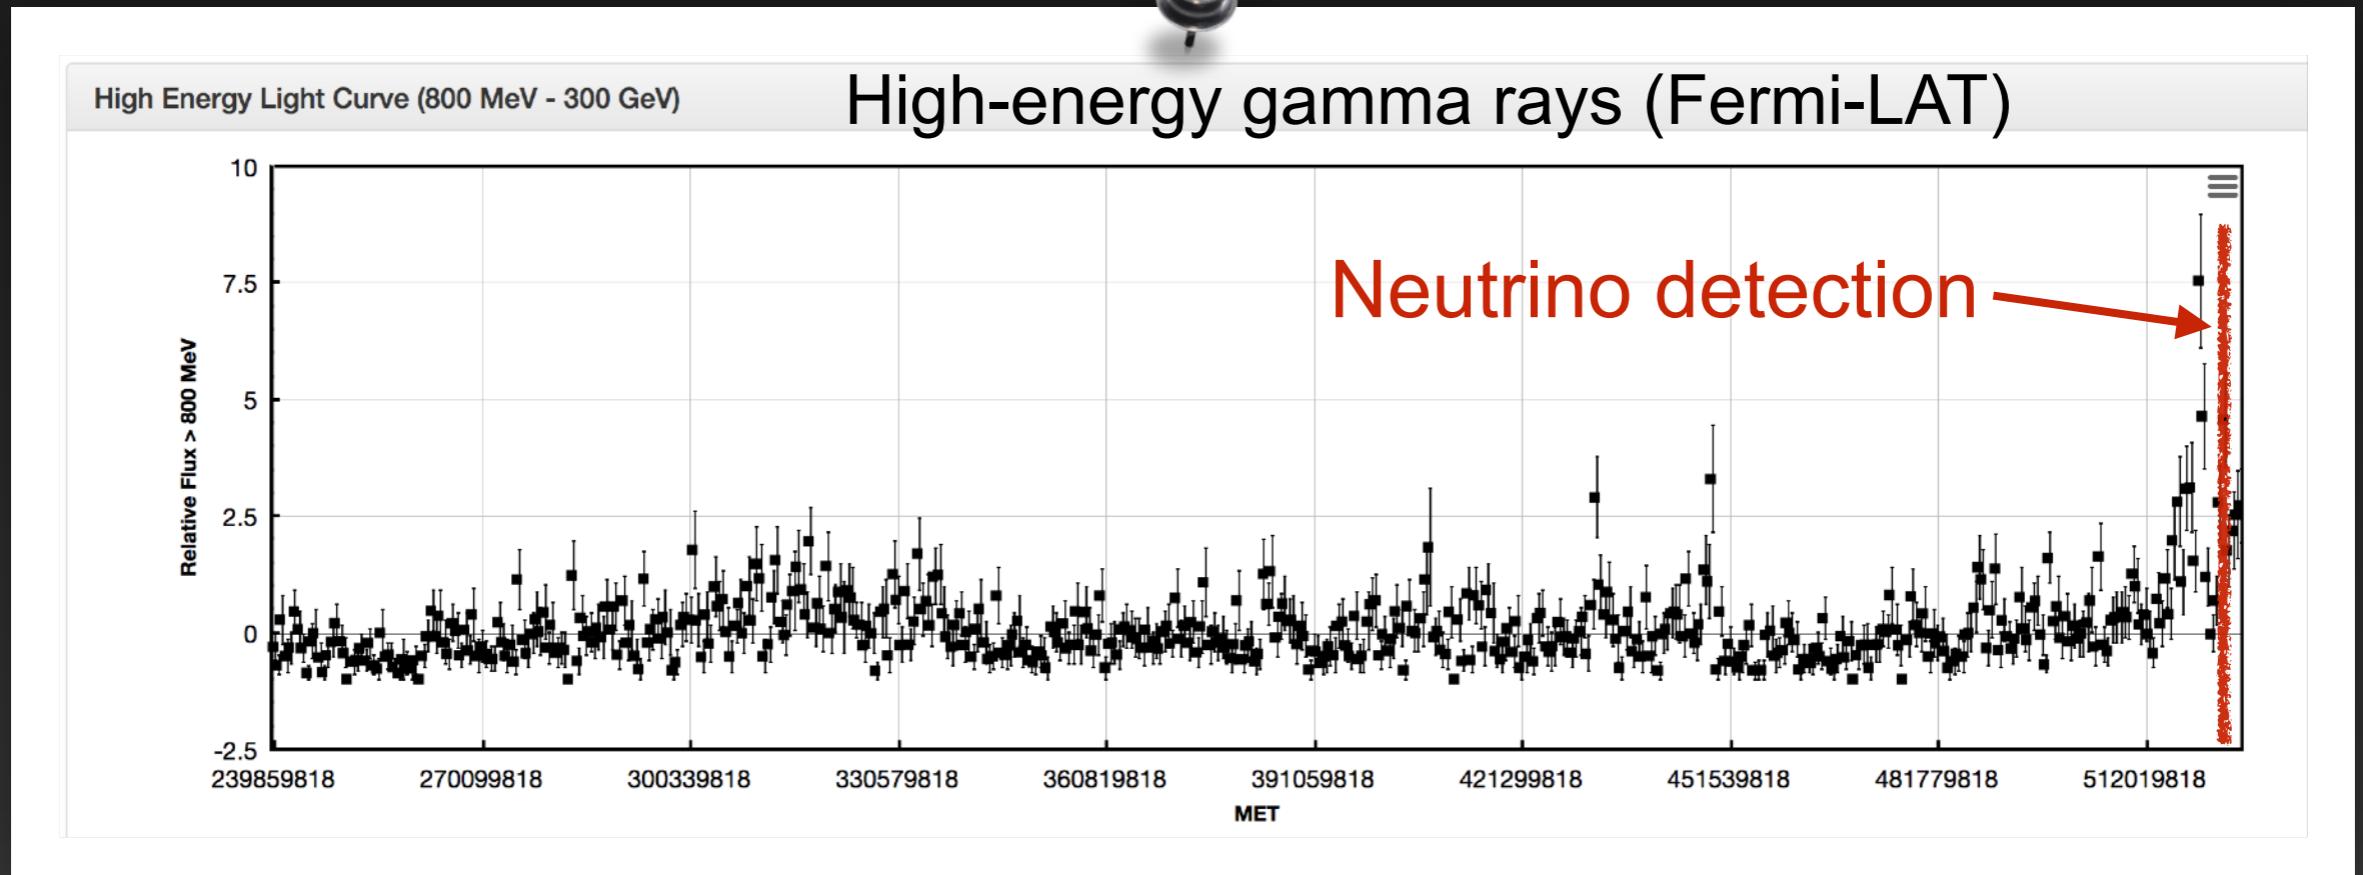

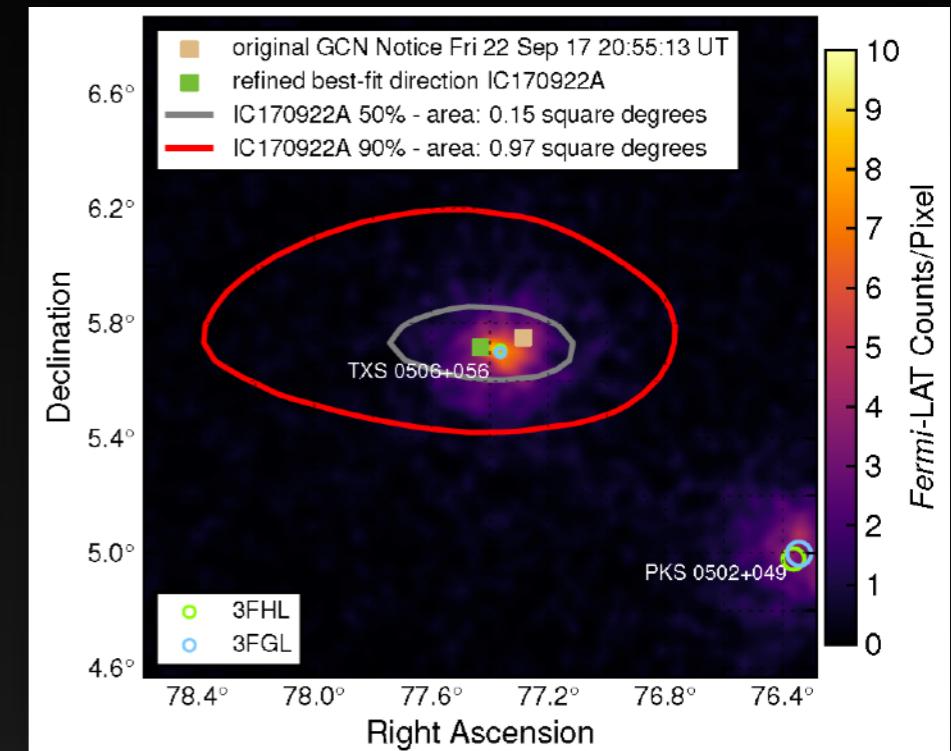

Fabian Schüssler (IRFU, CEA Paris-Saclay)

ACME  
Horizon Europe

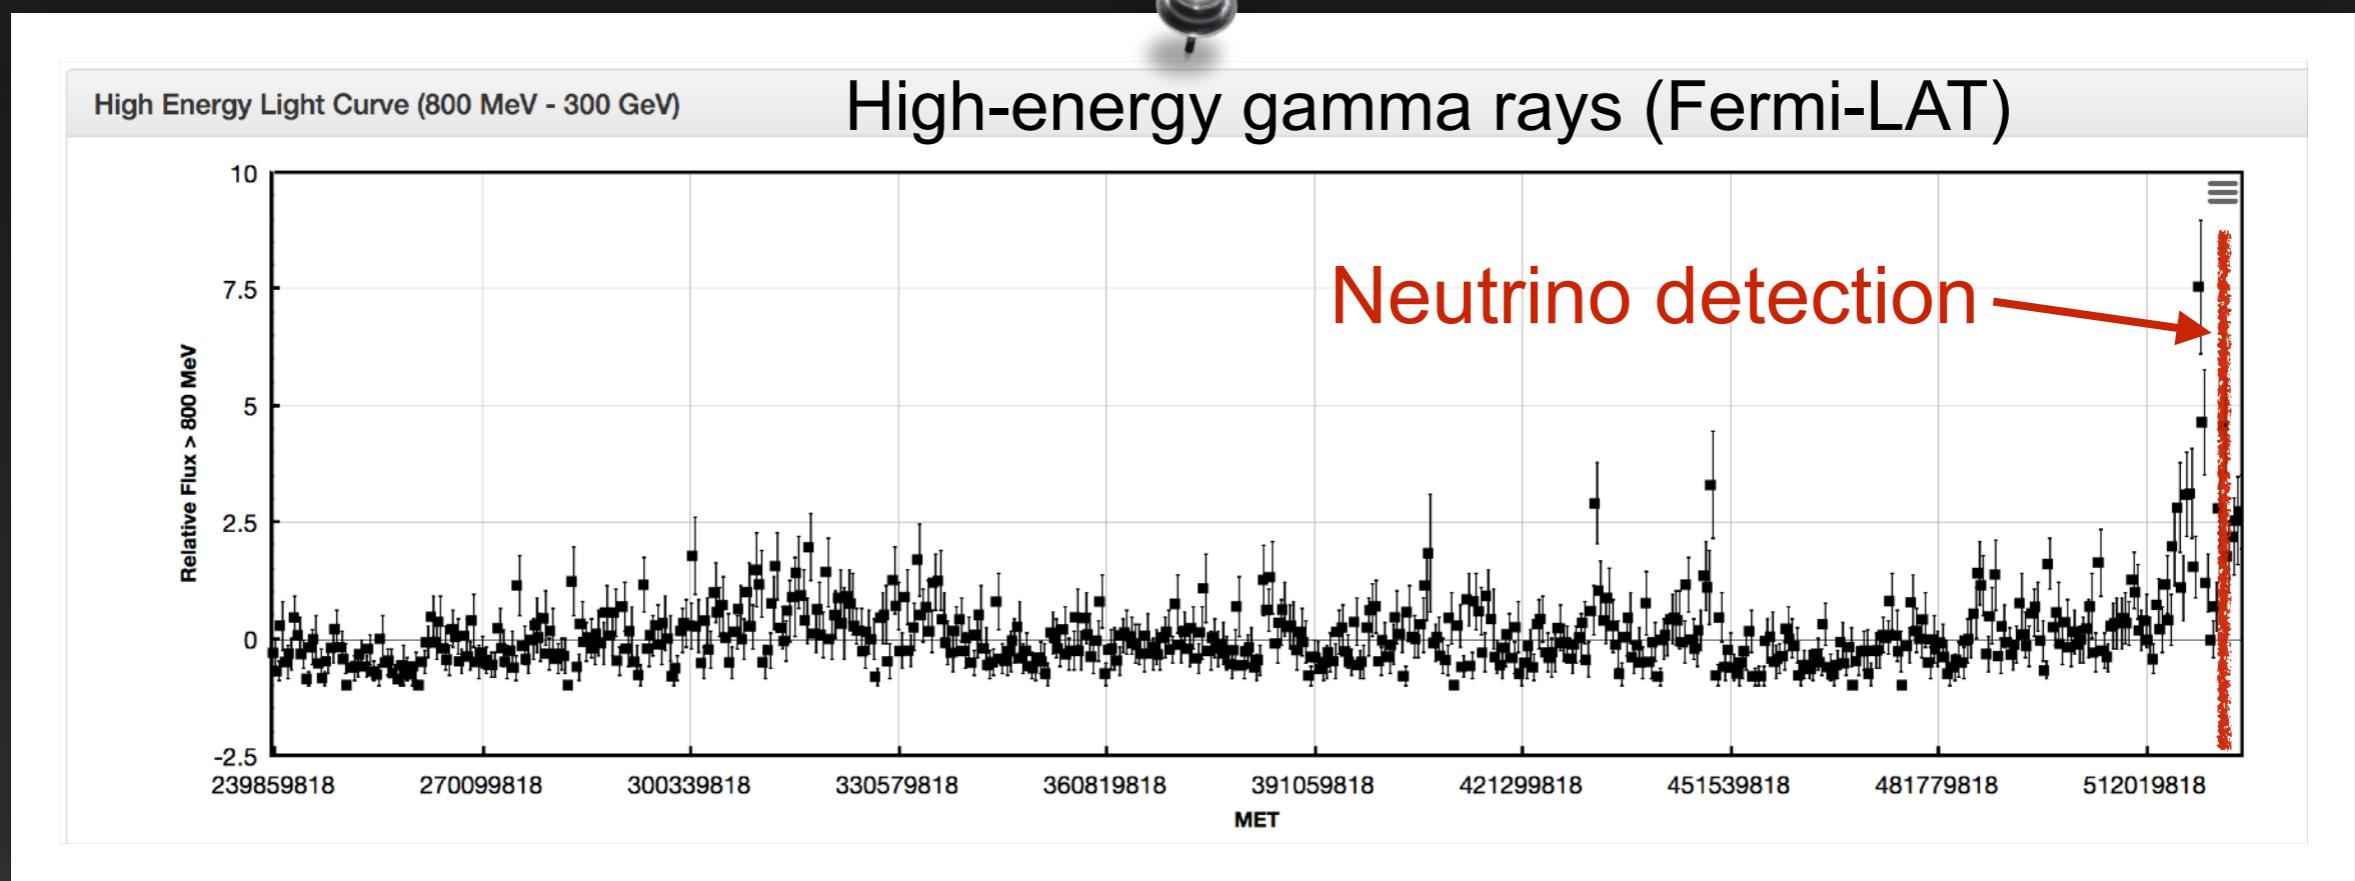

# IceCube-170922A and TXS 0506+056

- 22/09/2017: Detection of another high-energy neutrino of about 300 TeV by IceCube: automatic and public alert distribution to follow-up observatories at all wavelengths
- 28/09/2017 Fermi-LAT: Detection of an active blazar within the neutrino uncertainty region  
ATEL #10791

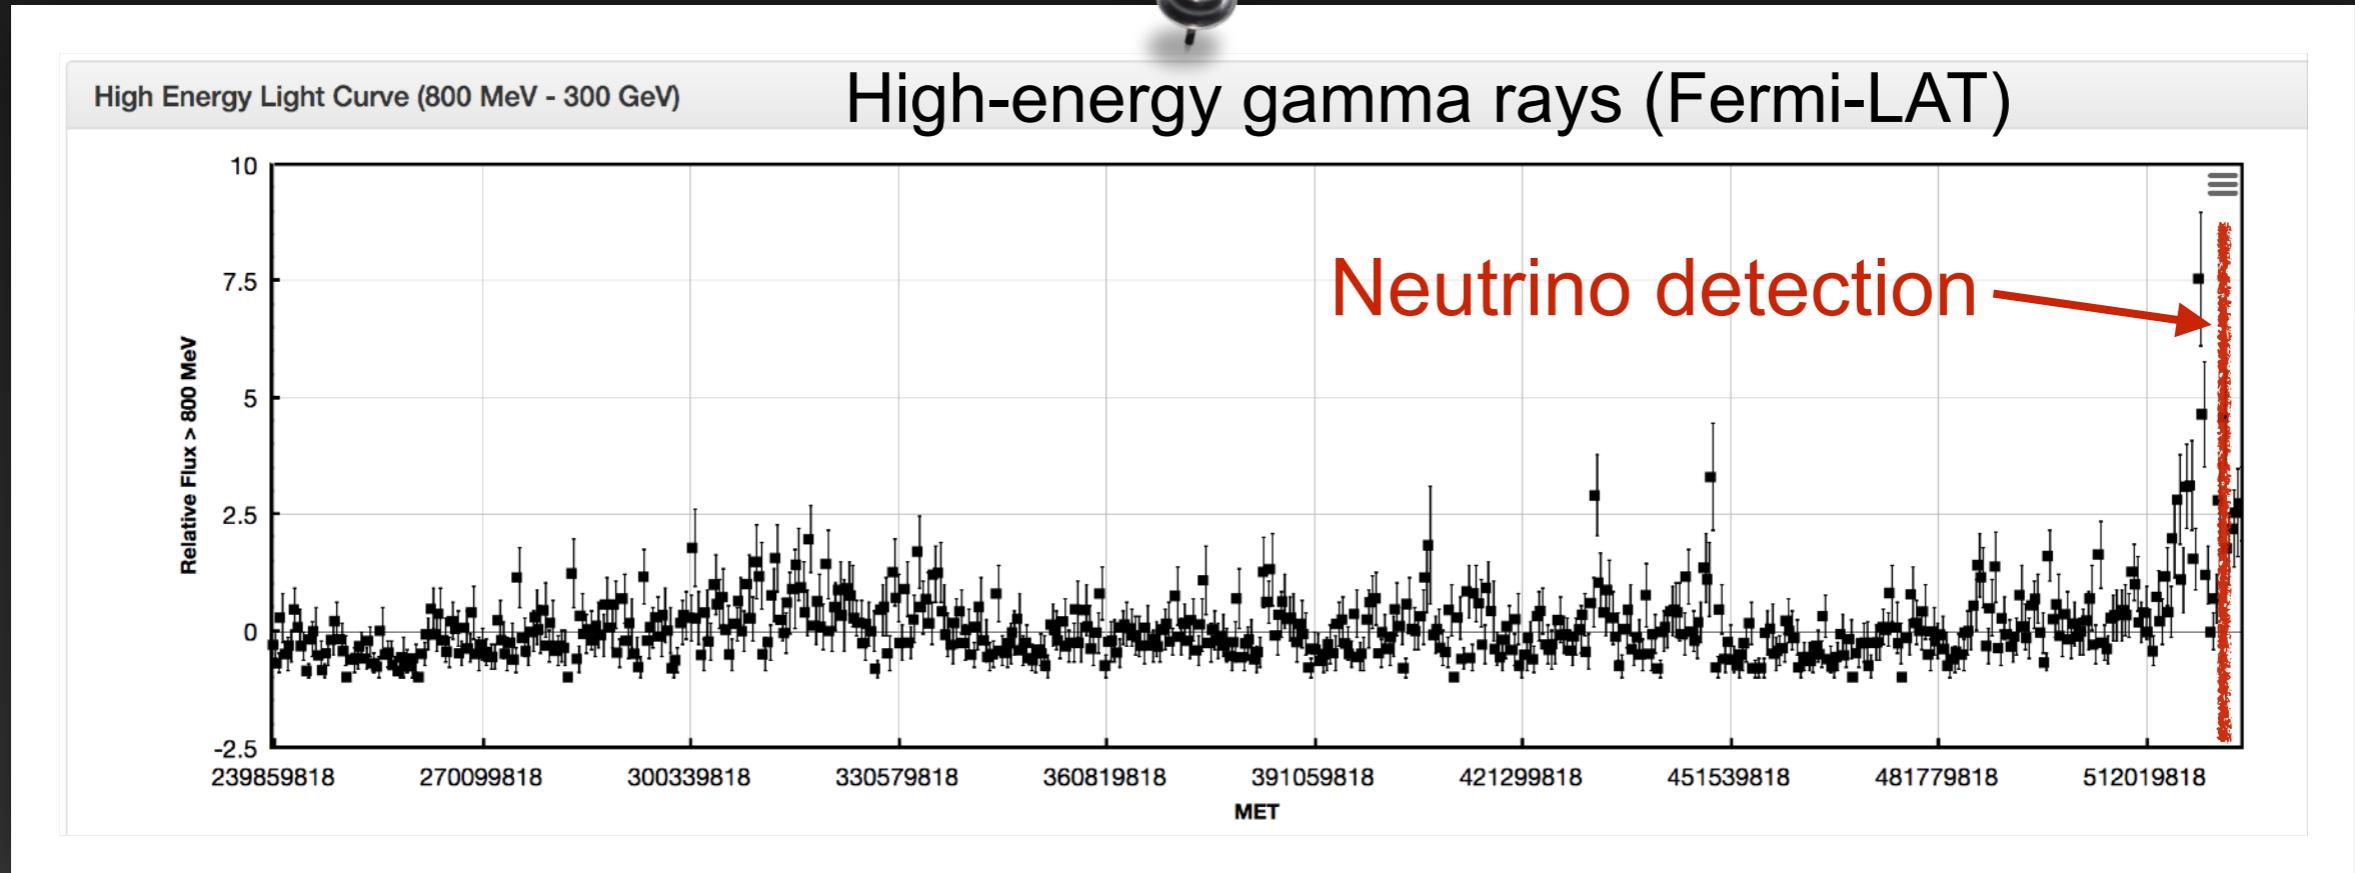

# Behind the curtain

- It took 6 days between the neutrino detection and the realization that there is a flaring blazar within the localisation uncertainty!

# Behind the curtain

- It took 6 days between the neutrino detection and the realization that there is a flaring blazar within the localisation uncertainty!
- Cone search within the neutrino uncertainty => TXS 0506+056
- Check state of the source(s) in Fermi-LAT: FAVA (*LCR*)
- Get optimal observation window for various observatories
- => Many tools are available but need for automatisation + interfaces

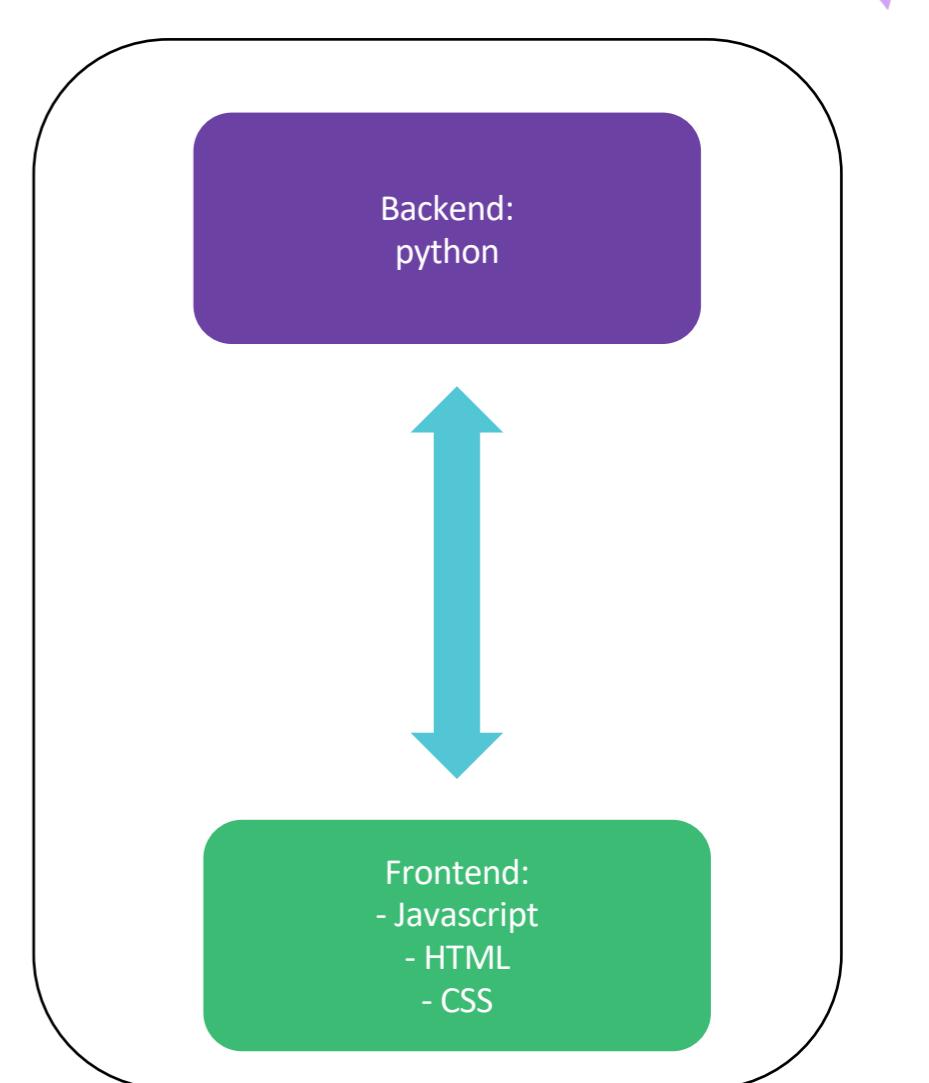

# First test

After 4 merges and  $\approx 200$  commits:

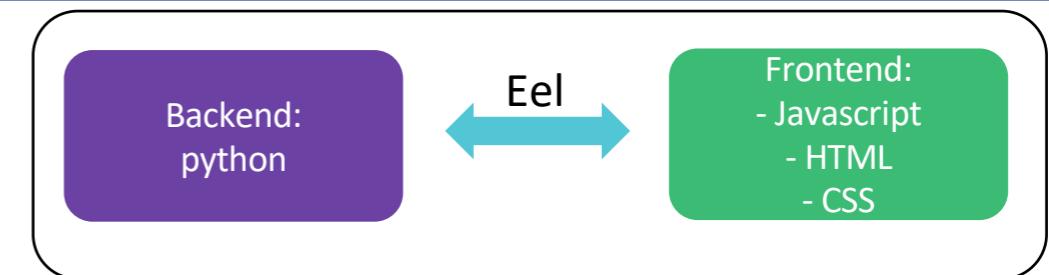

H.E.S.S. collaboration meeting (11.2019)

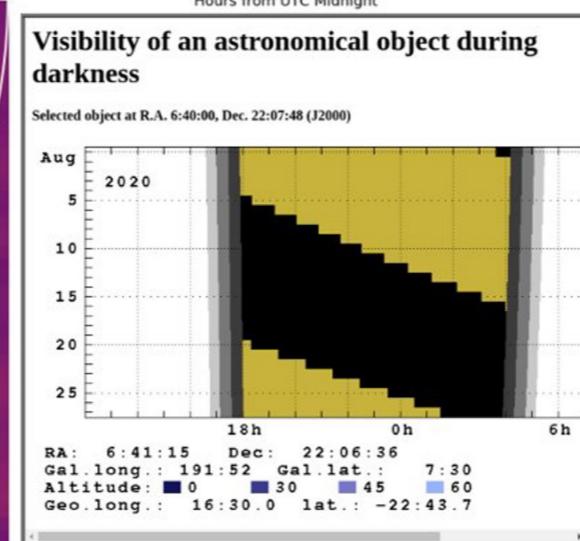

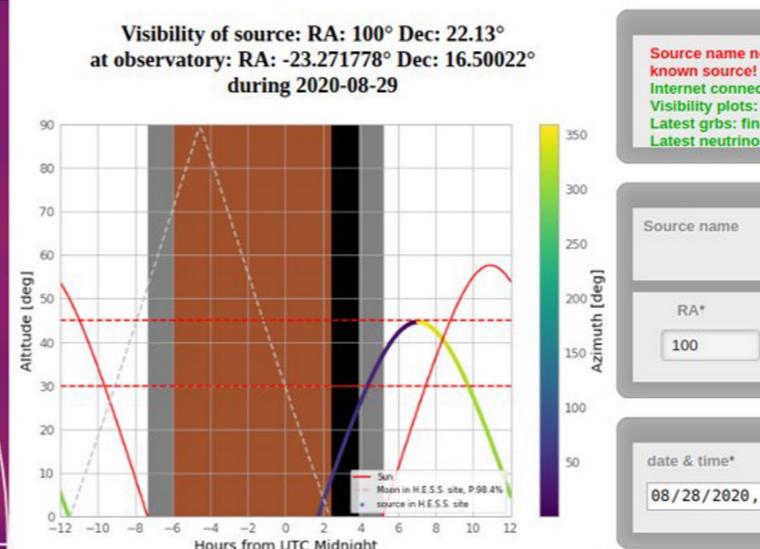

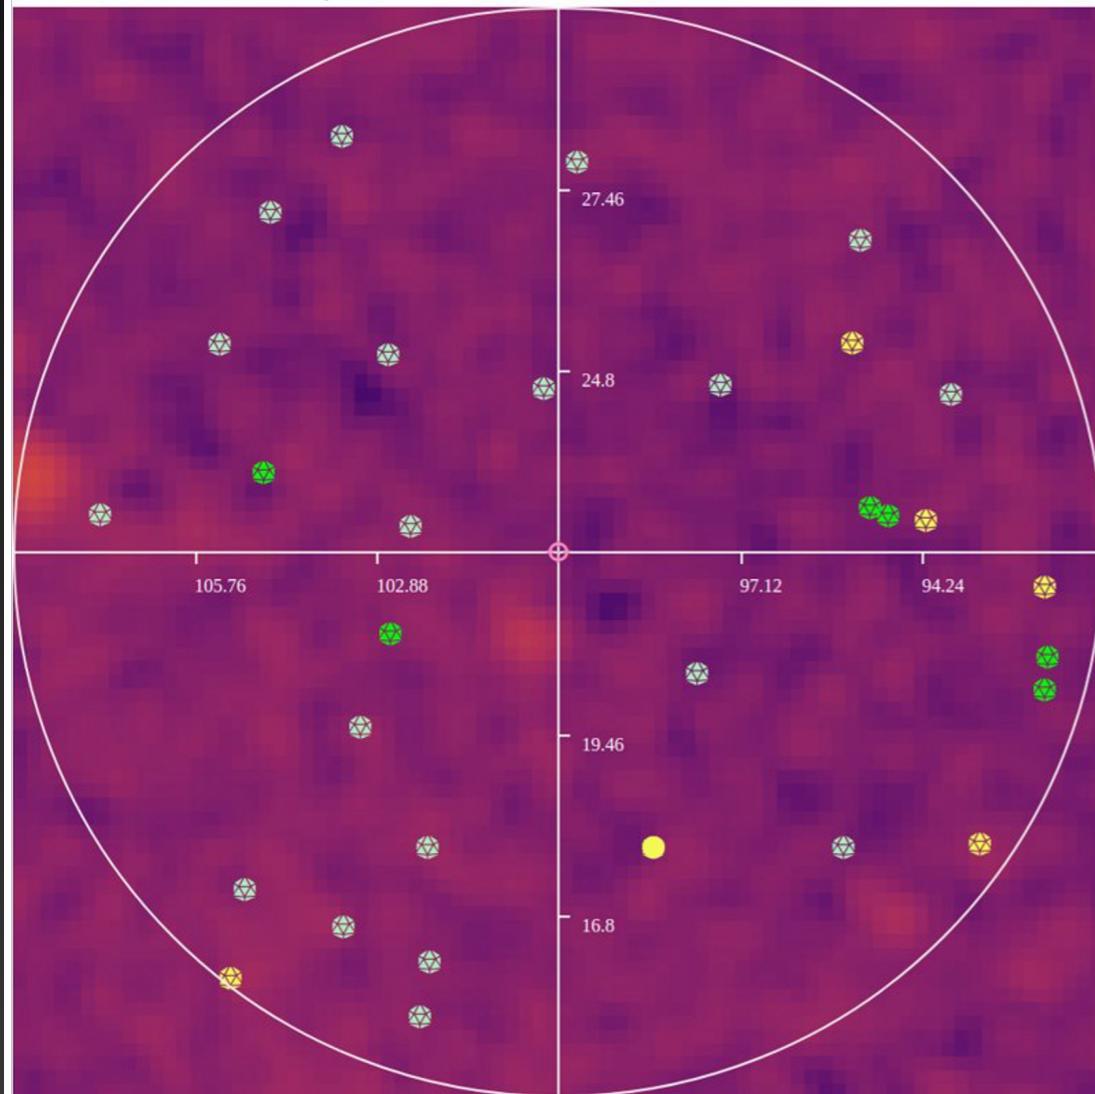

# 1st graphical interface

After further 10 merges and  $\approx 230$  commits:

# Current user interfaces

The screenshot displays the Astro-COLIBRI software interface, version v2.8.0. The top navigation bar includes tabs for 'Latest transients' and 'Cone search', along with personalization and status information ('logged out'). Below the navigation is a toolbar for 'Observatories' (Swift, Fermi, HAWC, IceCube, AMON, Integral, GECAM, FleaPLIC, LVC, Catalogs, Other) and 'Event type' (FRB, Unclassified OT, Classified OT, SN, GRB, burst, neutrino, nuem, GW, 4FGL, TeVCAT, SGR/AXP, IceCat). A date range selector shows '2023-11-08' to '2023-11-23'. On the right, there's a 'Science mode' button.

The main content area features several event cards on the left:

- S231123cg** (Gravitational wave): RA/Dec: 243.63°/44.20°, Date: 2023-11-23 13:54:30.
- GRB 231123A** (Gamma-ray burst): RA/Dec: 83.79°/-19.57° (± 9.16°), Date: 2023-11-23 02:44:04.
- Gamma-ray burst**: RA/Dec: 106.16°/-21.30° (± 1.59°), Date: 2023-11-22 15:12:41.
- GRB 231122A** (Gamma-ray burst): RA/Dec: 108.45°/-5.54° (± 3.82°), Date: 2023-11-22 12:44:22.
- RXJ131058.8+323335** (GeV flare):

In the center, a 'Cone search' panel is open for event **S231123cg** (Gravitational wave). It shows a 'Custom cone search' with RA/Dec: 243.63°, 44.20°, source: S231123cg, and radius: 1°. The search results are displayed on a celestial sphere plot with various colored markers representing different instruments or data types. The plot includes labels for 0°, 45°, 90°, 135°, 180°, 225°, 270°, and 315°.

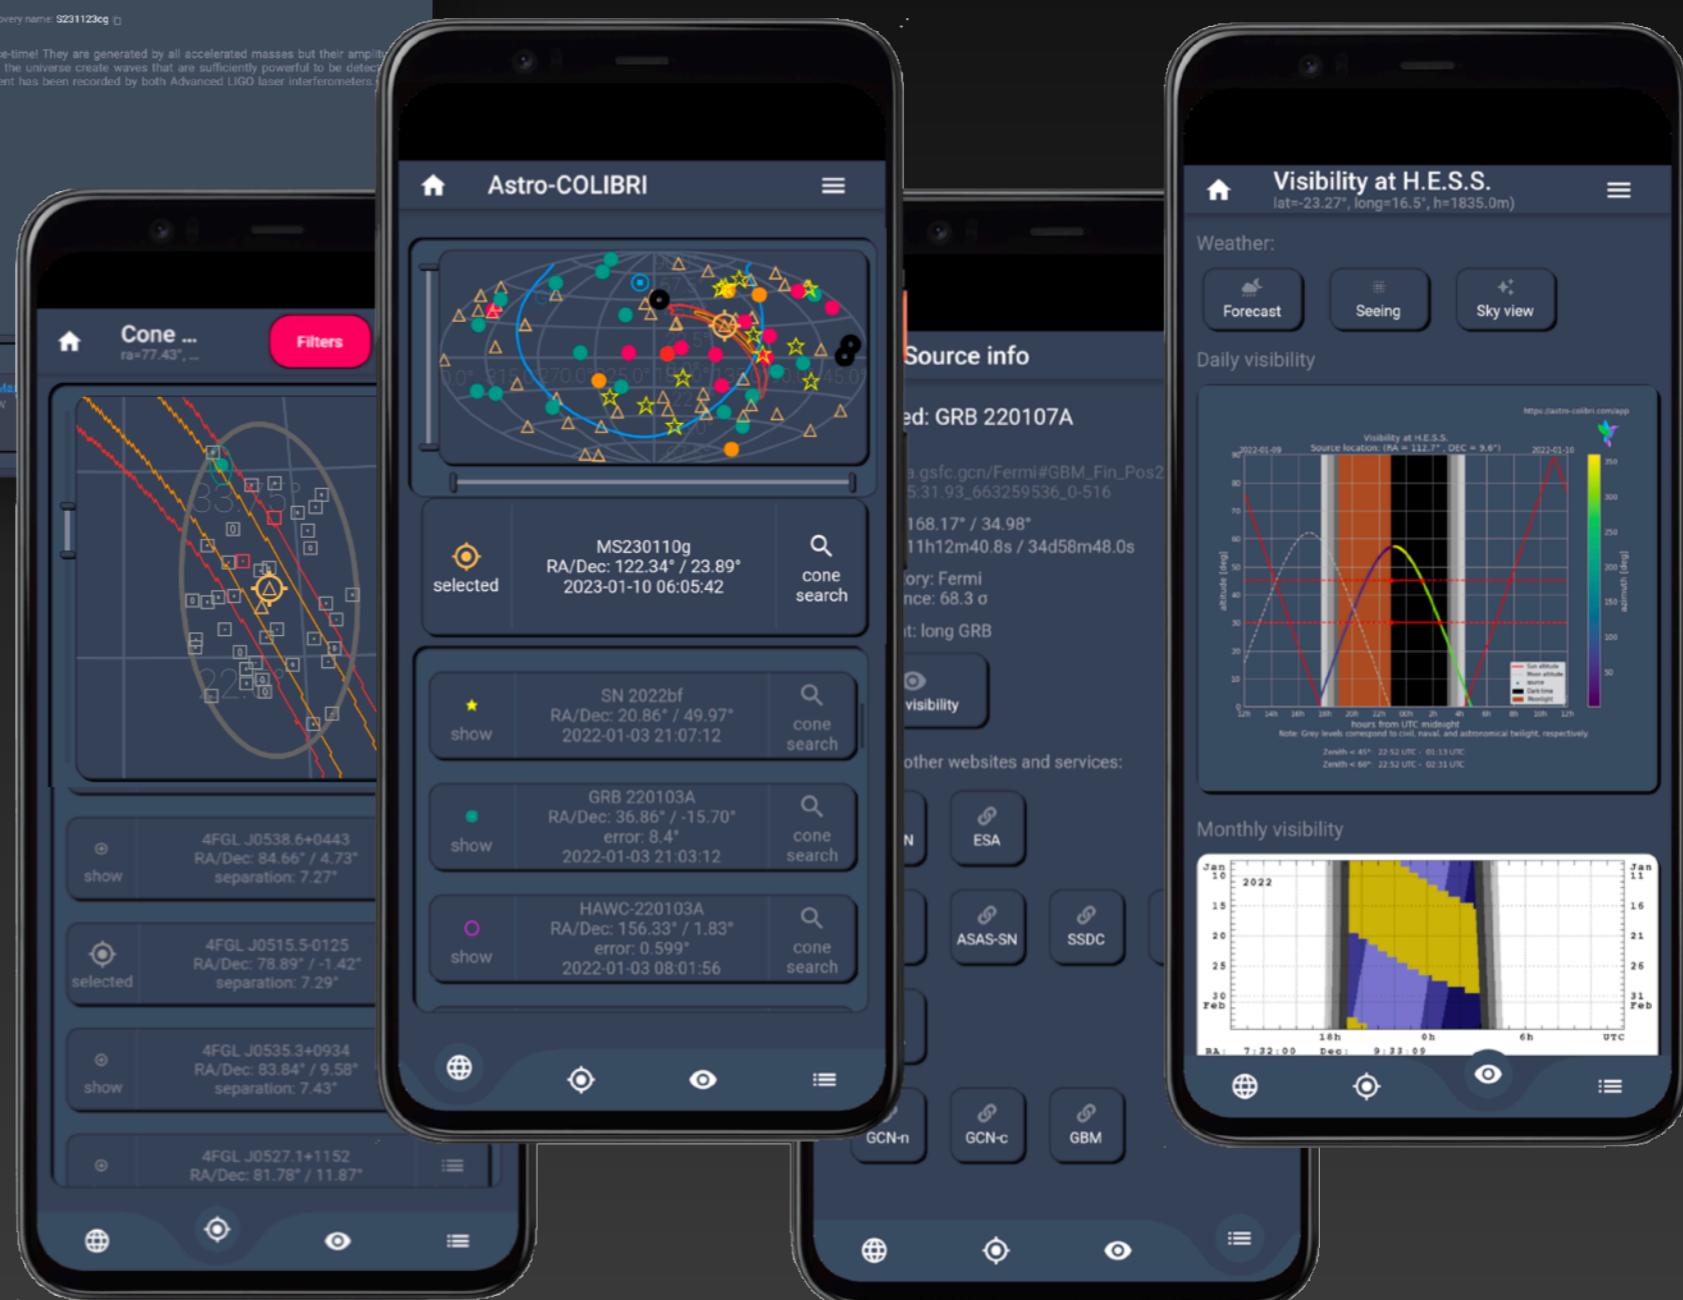

To the right of the plot, detailed info about the selected source is provided:

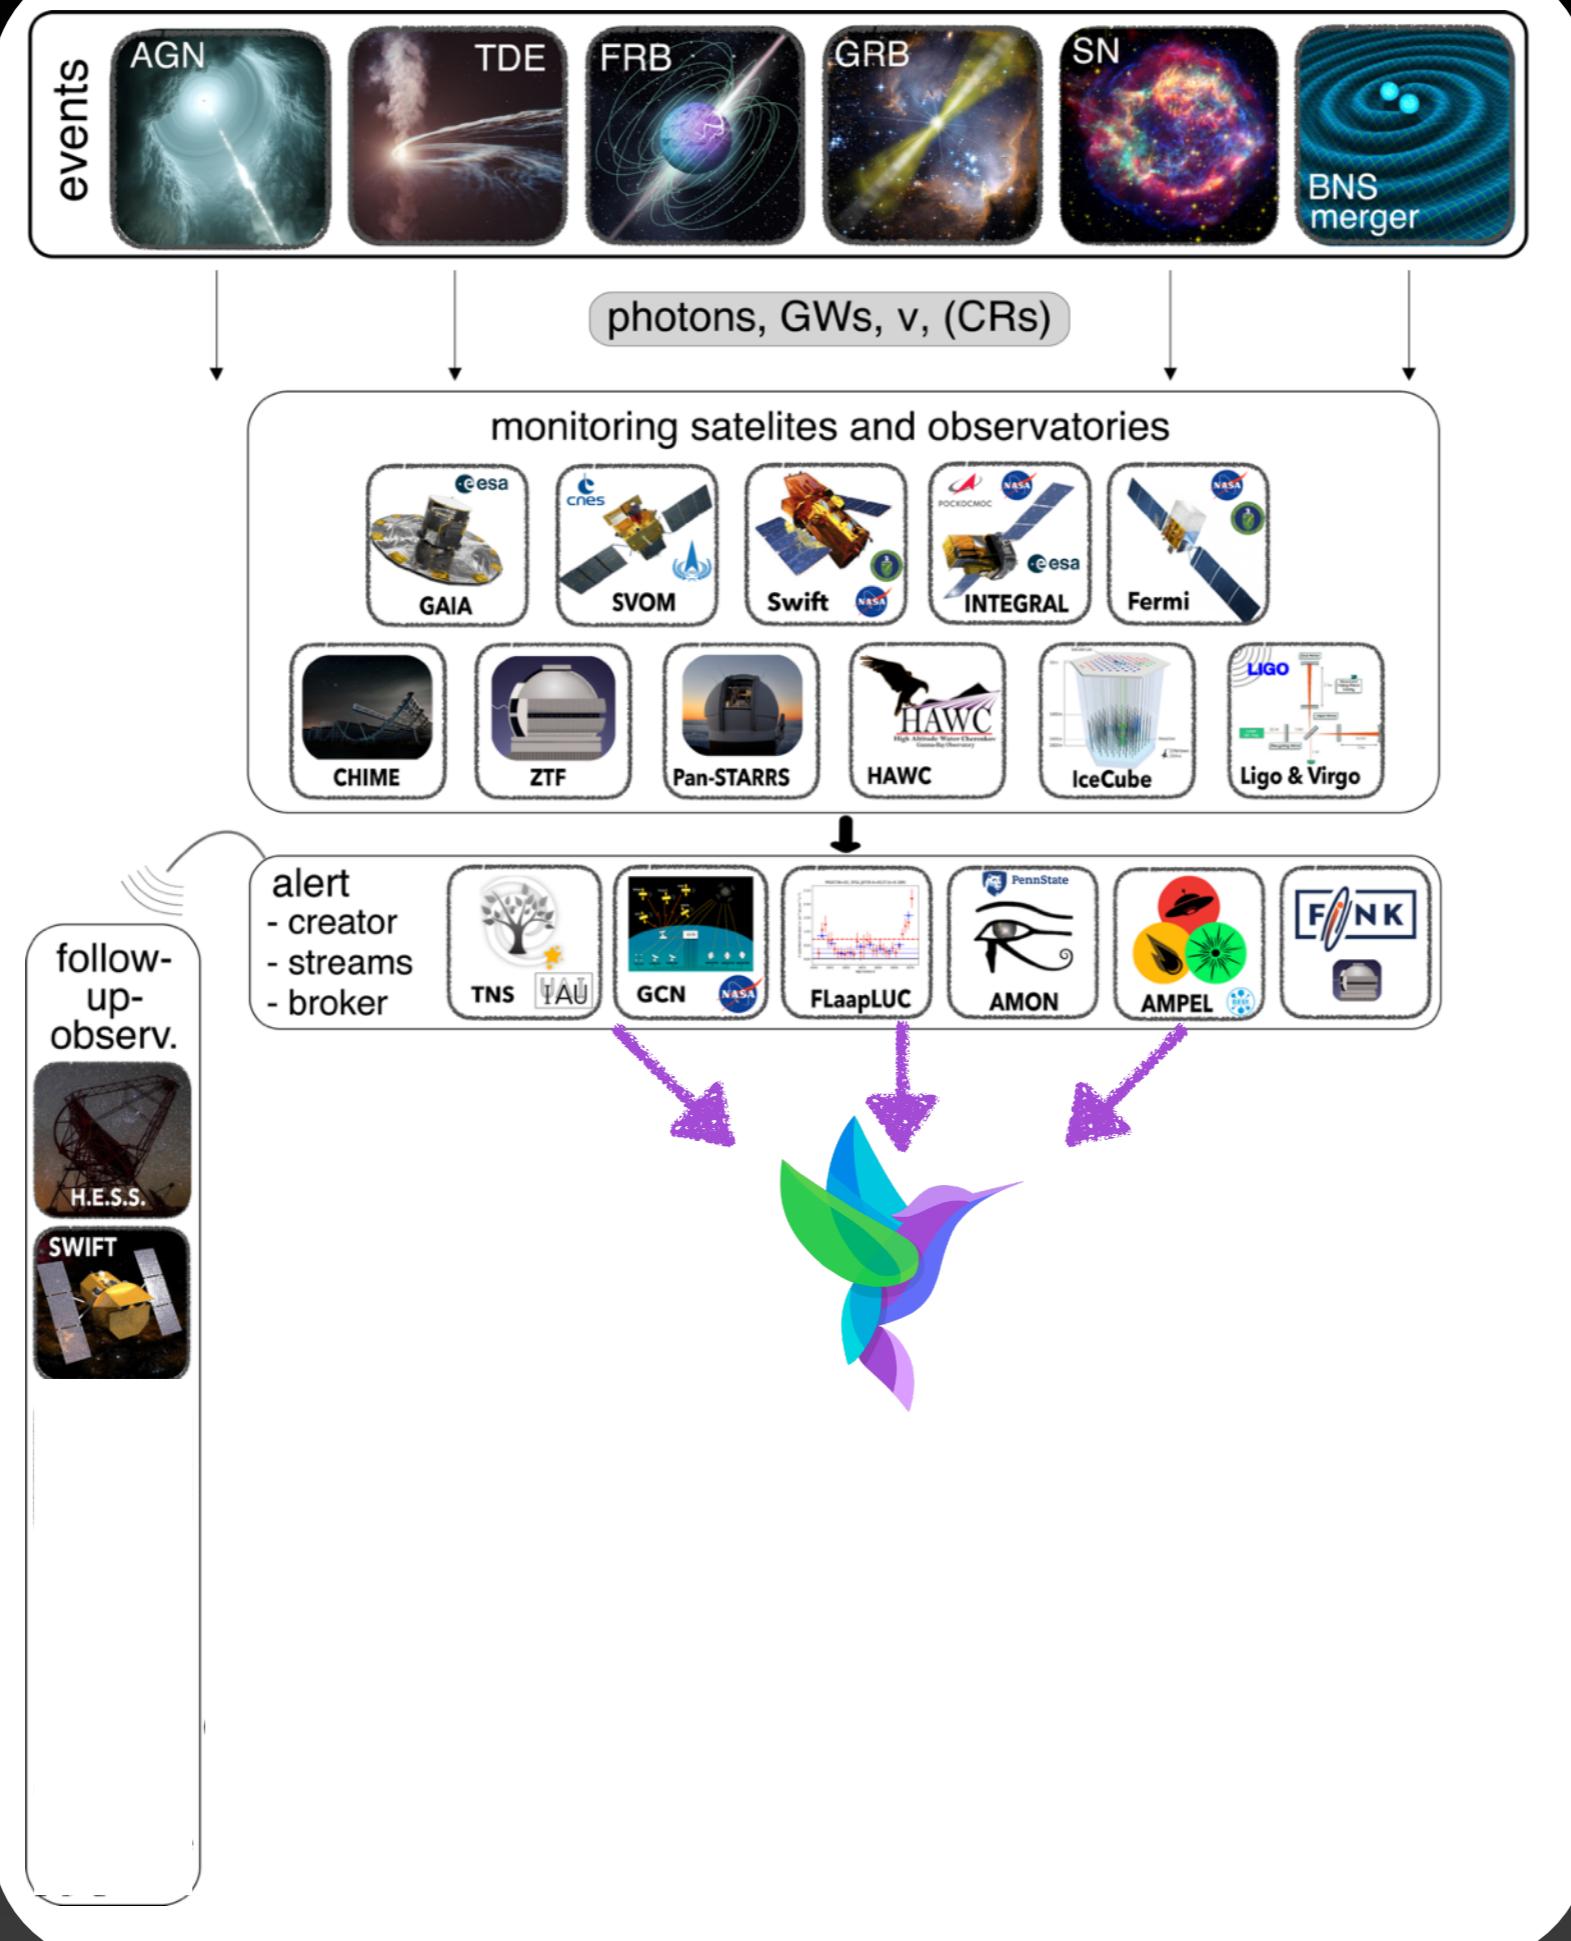

- VoEvent: XML, VoEvent: JSON, History: # 1
- name: S231123cg
- Detection time: 2023-11-23 13:54:30
- RA [deg]: 243.63 Dec [deg]: -44.20
- RA: 16h14m30.49s Dec: 44d12m5.51s
- instrument: LVC
- discovery name: S231123cg
- classification: BBH-1.00

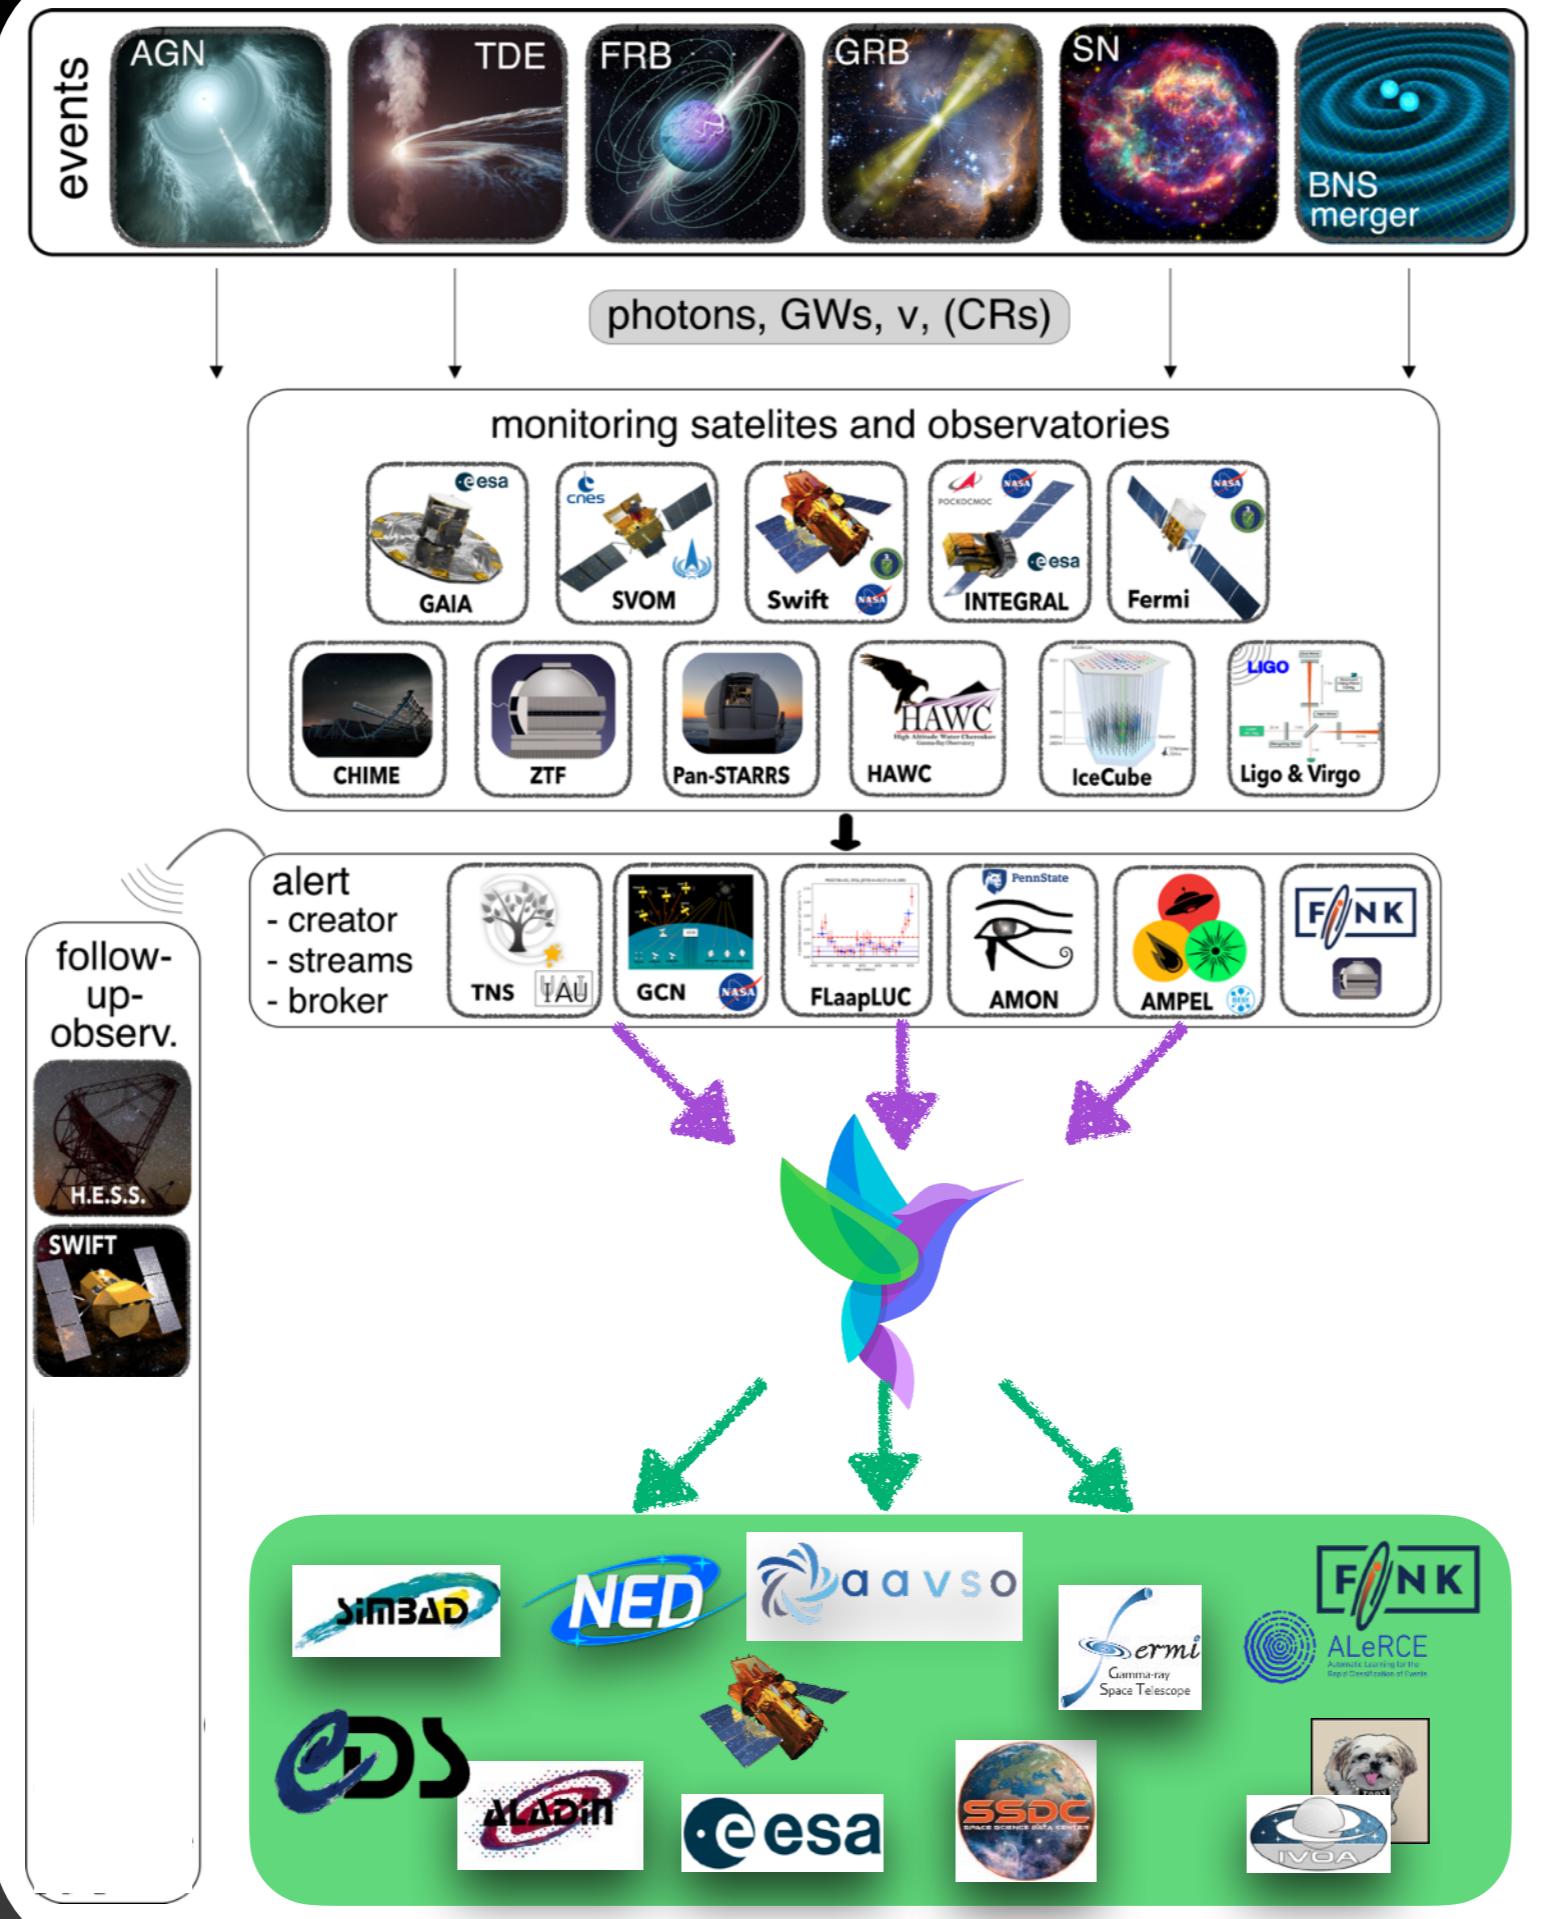

A descriptive text explains that gravitational waves are distortions of space-time generated by accelerated masses, with a note that current instruments have limited sensitivity. It also mentions the merger of two black holes.

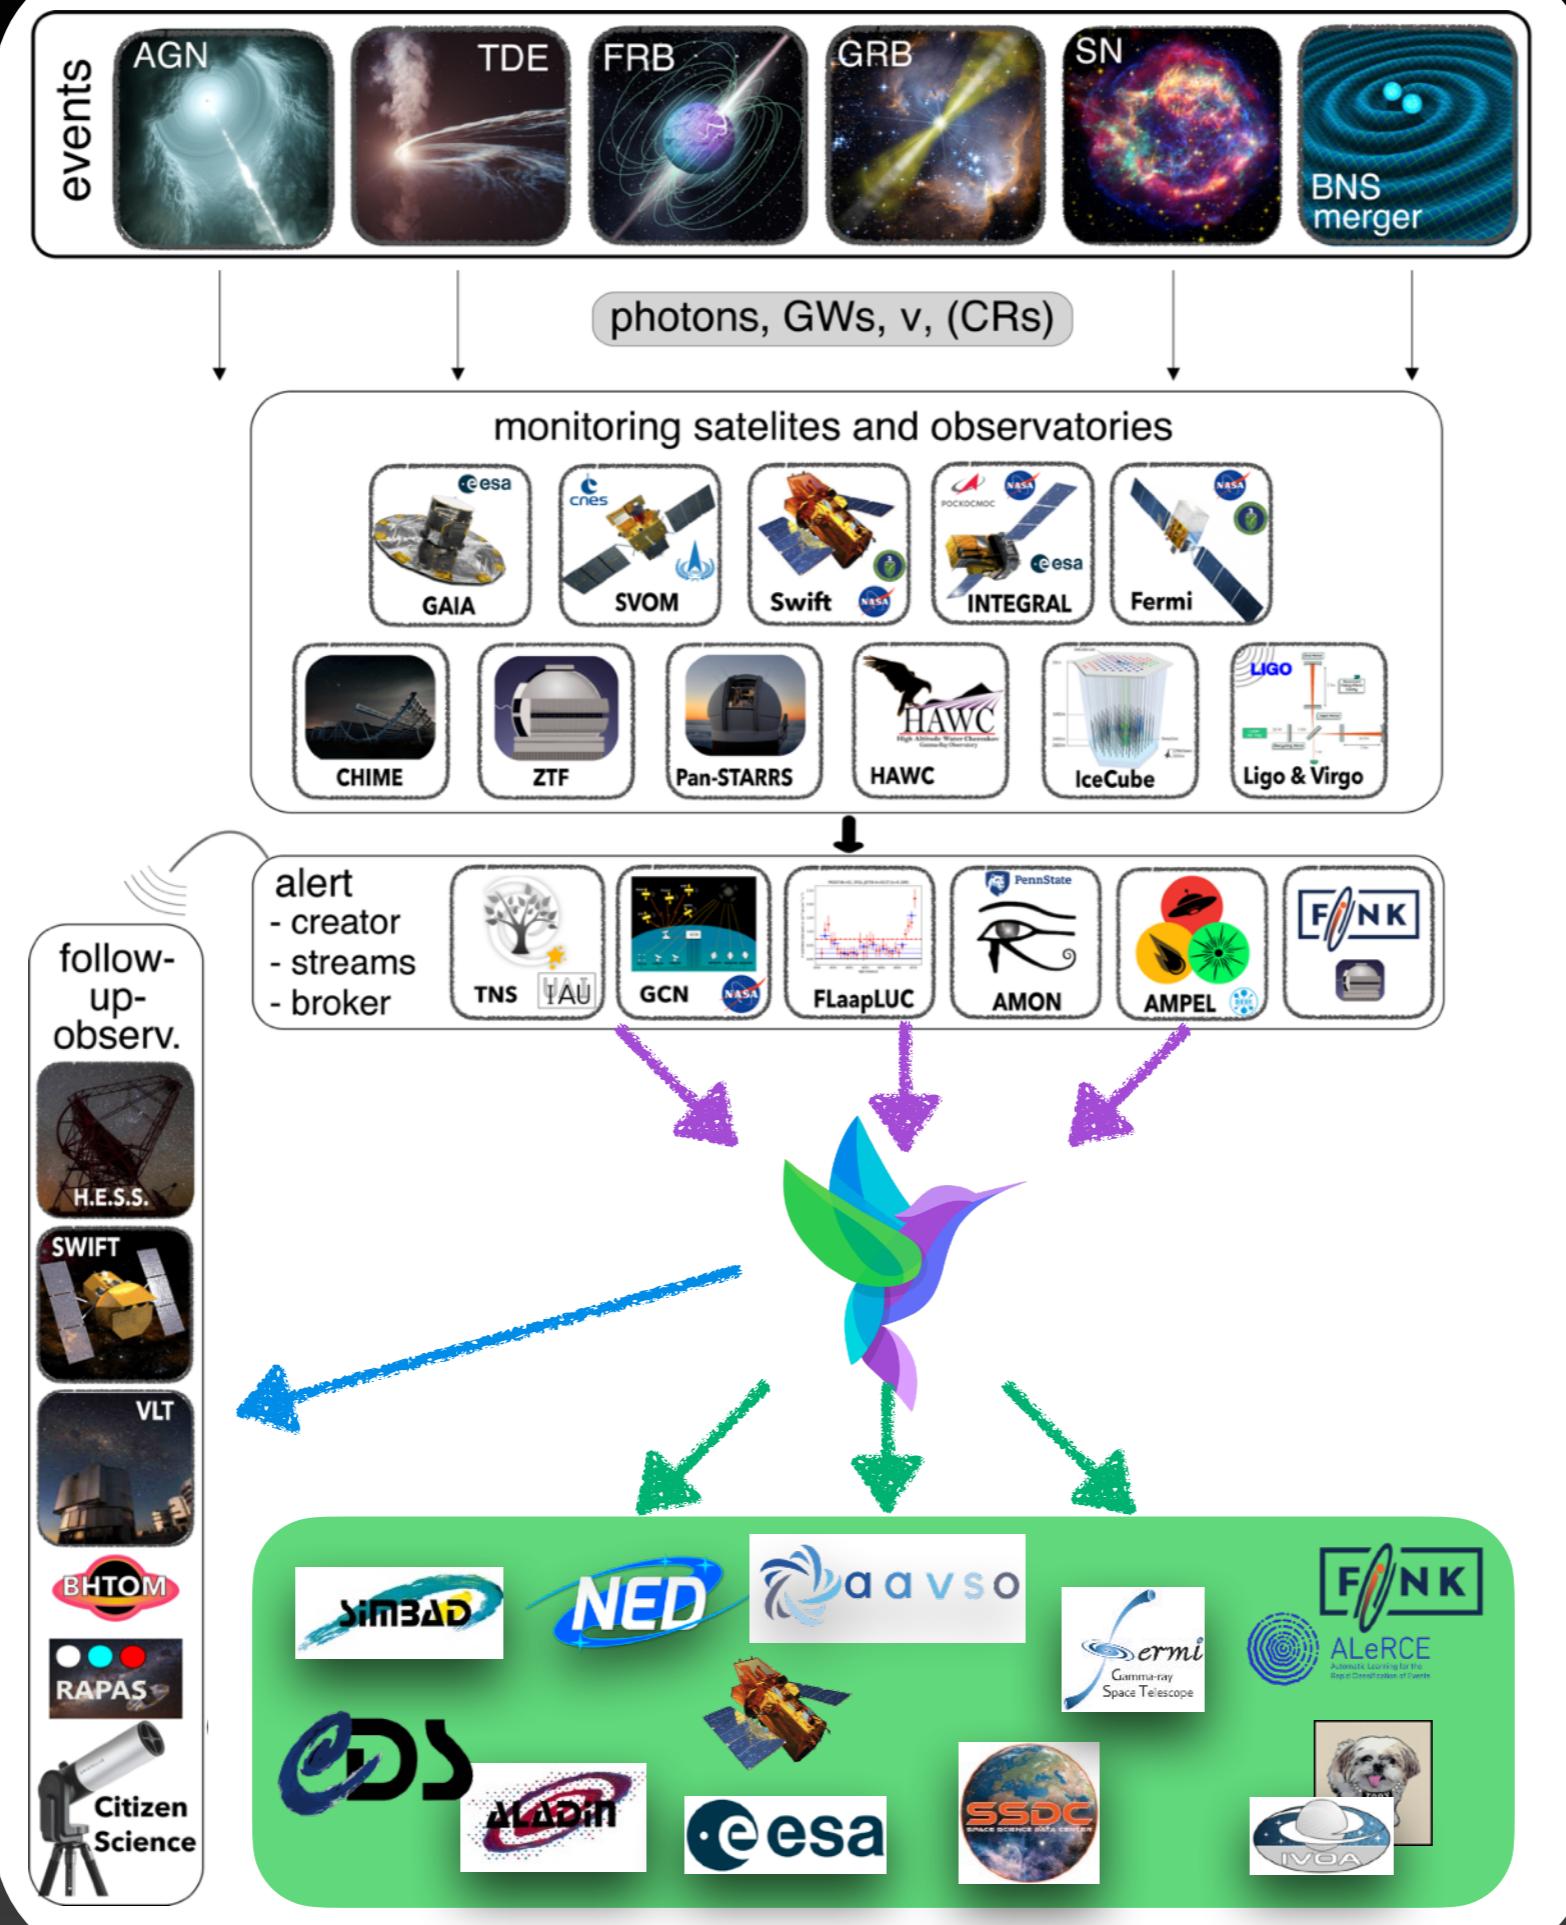

Links for further details include GraceDB and TreasureMap.

An inset smartphone screen on the right shows a simplified version of the cone search interface with a map and a 'Filters' button.

classification: BBH: 1.00  
Gravitational waves are distortions of space-time! They are generated by all accelerated masses but their amplitude is so tiny that only the most massive objects in the universe create waves that are sufficiently powerful to be detected by the current generation of instruments. This event has been recorded by both Advanced LIGO laser interferometers. It is most likely due to the merger of two black holes.

# Configurations

The screenshot shows the Astro-COLIBRI software interface. At the top, there is a navigation bar with various buttons and a status message "status: logged out". A yellow circle highlights the "Personalize" button, which has four sub-options: a user icon, a location pin, a globe, and an information icon. Below the navigation bar, a sidebar lists configuration options with icons:

- User accounts
- Choice of follow-up observatories
- Sky map configuration
- Link to API, documentation, etc.

A purple arrow points from the "Link to API, documentation, etc." text to a callout box at the bottom left. This callout box contains the text: "'Science mode': full event parameters, additional links to external platforms, visibility assessments, etc." Another purple arrow points from this text to a "science mode" button located in the main event details area. The main event details area shows an event named "S231213ap Gravitational wave" with a map, visibility curves, and links to other platforms like GraceDB, TreasureMap, GCN Viewer, GCN-n, and GW\_Fermi-LAT.

# Observatory selection

The observability is calculated for an observer at VLT Paranal: long = -70.40°, lat = -24.63°, height = 2635m.

You can change the observer location by choosing one of the following observatories

**Radio**

ALMA ASKAP ATCA MeerKAT MWA Nançay Murriyang/Parkes

**Optical**

Jilin Keck Mount Wilson OHP Palomar SALT San Pedro Mártir VLT Paranal Victor M. Blanco Xinglong Yunnan

**High energy**

HAWC H.E.S.S. LHAASO LST MAGIC VERITAS

**My observatories :**

A screenshot of the Astro-COLIBRI software interface. At the top, there's a navigation bar with buttons for 'Select action', 'Latest transients', 'Cone search', and various sharing and status icons. A yellow circle highlights the 'Personalize' button, which has a purple arrow pointing down to a modal window. This modal contains text about observability at VLT Paranal and lists other observatories for selection. Below the modal is a map showing celestial coordinates (RA/Dec) and a form for entering observer coordinates (longitude, latitude, altitude, FoV, zenith limit, moon fraction, name). Two transient events are listed on the left: 'AT 2023aabz' and 'ZTF23abtnlaf'. The bottom right corner shows the URL 'https://astro-colibri.com'.

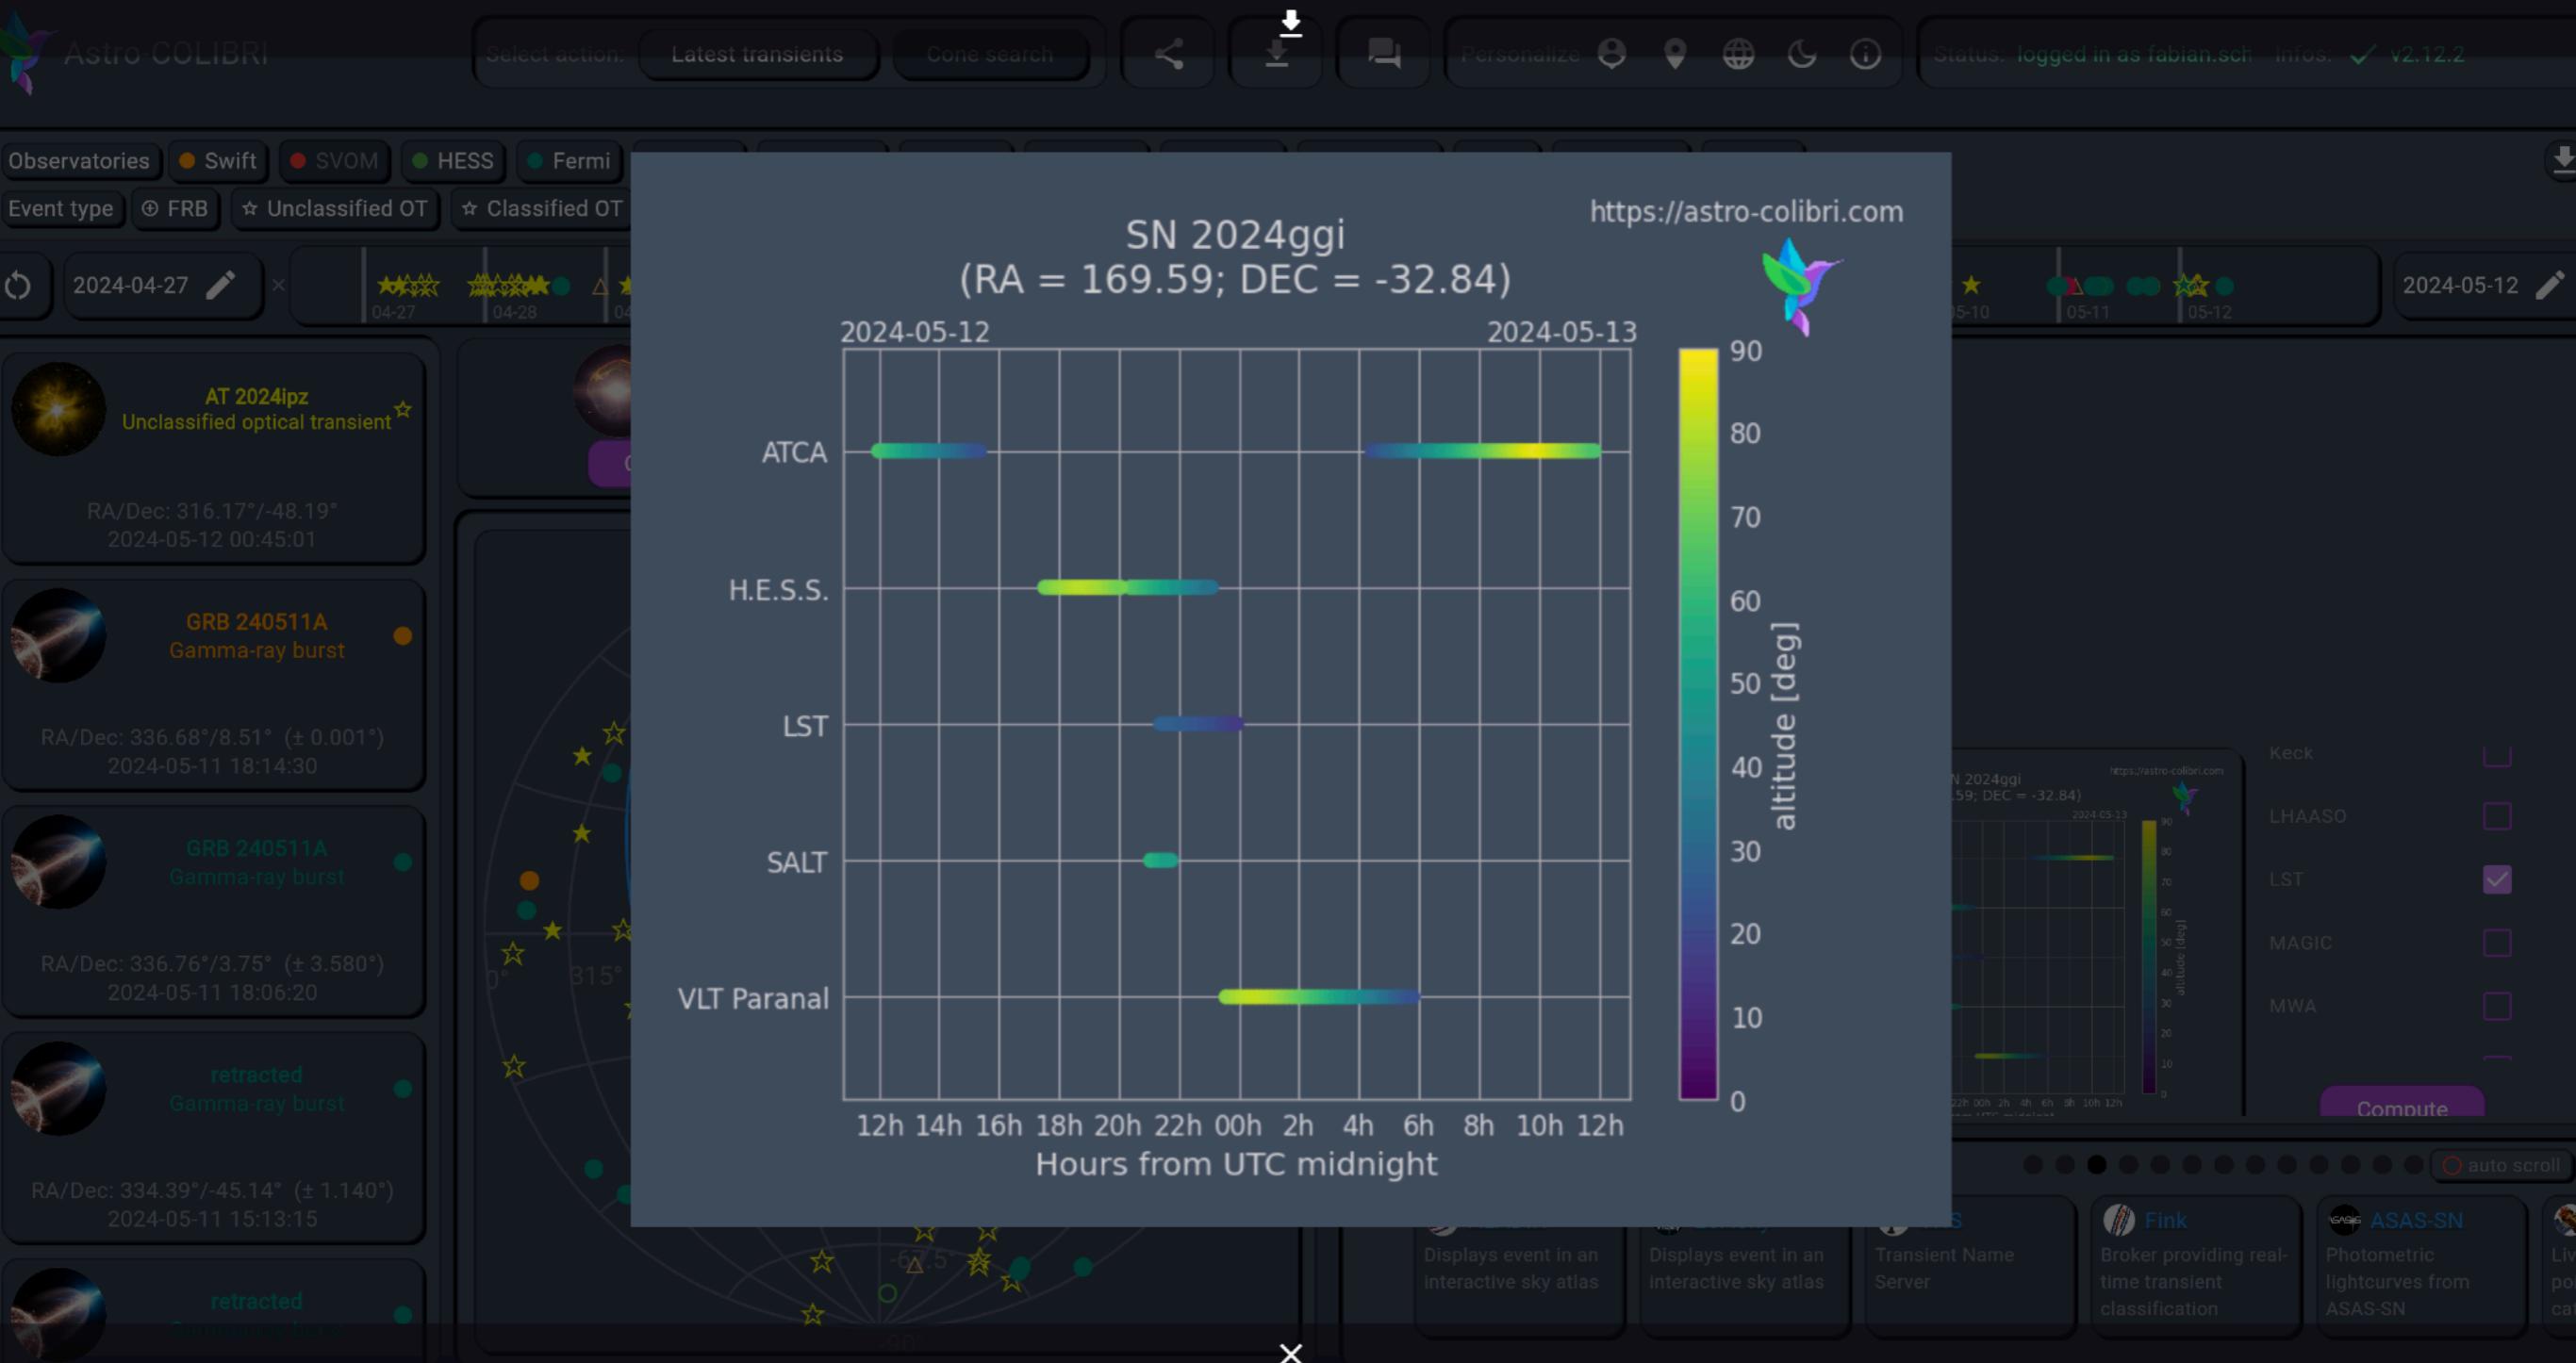

# Observability

The screenshot shows the Astro-COLIBRI software interface. At the top, there are tabs for 'Select action', 'Latest transients', 'Cone search', and a 'Personalize' button (circled in orange). The status bar indicates 'Status: logged out' and 'Infos: ✓ v2.8.0'. Below the tabs is a legend for observatories and event types. A central plot shows 'Visibility at H.E.S.S.' for a source at RA = 120.8°, DEC = 9.8° on April 13, 2023. It displays altitude [deg] vs hours from UTC midnight, with a color scale for azimuth [deg]. The plot includes curves for Sun altitude (red), Moon altitude (green), source position (blue dot), dark time (black), and moonlight (orange). A note specifies that grey levels correspond to civil, naval, and astronomical twilight. Below the plot, text indicates zenith angles: Zenith < 45°: 17:50 UTC - 19:40 UTC and Zenith < 60°: 17:50 UTC - 20:59 UTC. To the right, a detailed event view for a source on November 23, 2023, is shown, including a timeline, VoEvent details, and another visibility plot for November 24, 2023. The bottom features a navigation bar with links like 'TreasureMap', 'GCN Viewer', 'GCN-n', and 'GW Fermi-LAT'.

# Astro-COLIBRI

- Astro-COLIBRI: novel platform providing easy access to
  - transient detections (optical transients, GRBs, FRBs, TDEs, high-energy neutrinos, GWs, etc.)
  - interfaces: <https://astro-colibri.com> + Android + iOS
  - API + documentation: <https://astro-colibri.science>
  - Forum: <https://forum.astro-colibri.science>
  - availability > 99% (fully cloud based architecture)
- P. Reichherzer et al., ApJS 256, 2021 ([link](#)) + Galaxies 11, 2022 ([link](#))
