## Peaks and valleys

*mardi 21 octobre 2025 09:45 (15 minutes)*

After years studying broadband spectral distributions and trying to constrain theoretical models, a physicist can fall into a valley of scientific frustration. The recent multi messenger events brought a lot of excitement and new energies to face the old and new challenges of this often very abstract field of research. What can we learn from the past multiwavelength efforts and tools and what can we do to ride the multi messenger wave?
