

Open Data and Free/libre Software

jeudi 9 avril 2026 14:00 (3h 30m)

Research is based on reproducibility and an incremental improvement process. Open Science movement has been developed to facilitate this work and relies on 3 legs: open access to publications, open data and libre software.

Topics:

- open data: organization, conditions of their publication and reuse, valorization ;
- free/libre software: software licences, valorization ;
- data management plan (DMP) : associated tools, lifecycle.

Orateur: Dr GAURON, Philippe (IJCLab/CNRS-Université Paris-Saclay)
