

Hello everyone, my name is Pieter

I defended my PhD in 2017 at the University of Antwerp, in Belgium.

I was a postdoc in Krakow (PL), Pavia (IT), Cagliari (IT), in Ecole Polytechnique, and again in Antwerp.

In IJCLab, I mainly work with Jean-Philippe Lansberg on perturbative QCD calculations for heavy-quarkonium.

My wife and I have two kids, aged 4 and (almost) 2. They are wonderful.

But they don't sleep, which is why you have high chances to run into me close to the coffee machine.

If I get the opportunity, I like to do outside sports, preferably in the mountains.
