Higgs Hunting
30th of July 2019

Coupling measurements

◆ Two scenarios for systematics

- S1: Run-2 systematics
- S2: Baseline

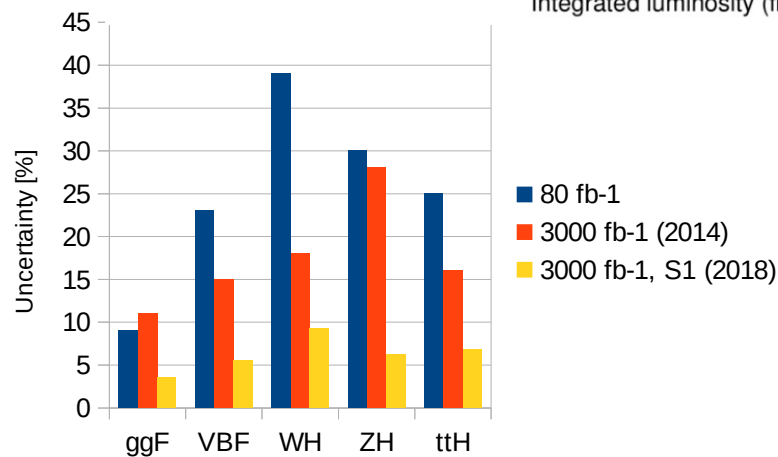

◆ Systematics dominated (except for $Z\gamma$ and $\mu\mu$)

- Q : ideas for improvements?
- theory systematics halved:
 Q : realistic? how to reach this?

◆ Comparison to previous extrapolations

- Q : do we understand what changed?
- Q : can we expect more improvements?

Couplings to 2nd generation fermions (c quark)

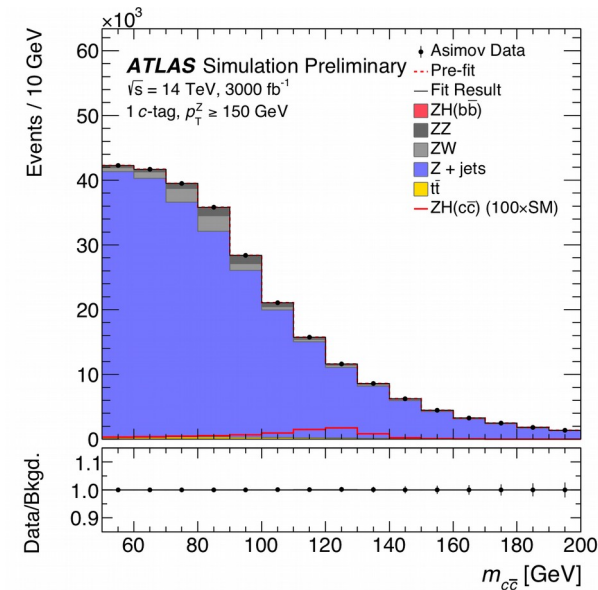

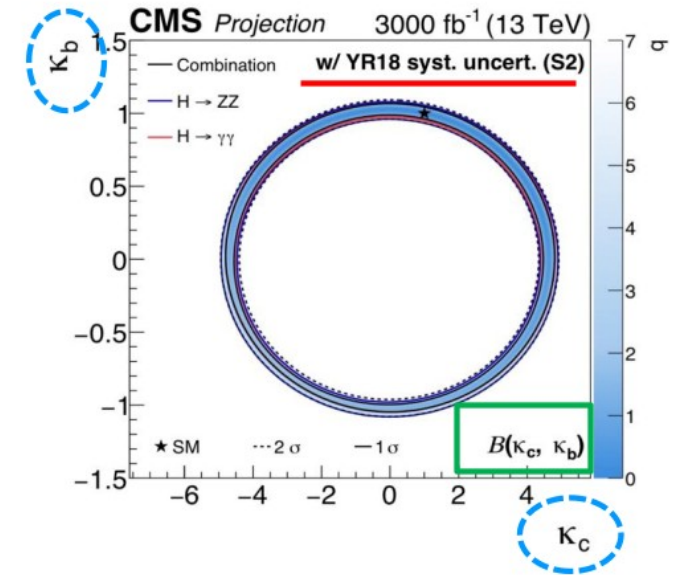

- ◆ Charm: Differential cross-section Higgs pT
 - CMS, HL-LHC: $-4.9 < \kappa_c < 4.8$ (and $-1.1 < \kappa_b < 1.1$)
 - ATLAS, Run-2, 139 fb⁻¹: $-15 < \kappa_c < 19$
 - *Q*: assumptions? model-dependence?

- ◆ $VH(\rightarrow c\bar{c})$
 - ATLAS, HL-LHC: 6.3*SM
 - Run-2, ~36 fb⁻¹:
 - ATLAS: 150*SM \rightarrow extrapolated to 3000 fb⁻¹: ~4*SM
 - CMS: 37*SM \rightarrow extrapolated to 3000 fb⁻¹: ~15*SM
 - *Q*: sensitivity to κ_c ?

- ◆ *Q*: Comparison between methods?

- ◆ *Q*: What about $H \rightarrow J/\psi \gamma$?

- ◆ *Q*: Access to $\mu\mu$ coupling?

Higgs self-couplings

◆ Comparison of expected significance of HH production (YR):

	Statistical-only		Statistical + Systematic	
	ATLAS	CMS	ATLAS	CMS
$HH \rightarrow b\bar{b}b\bar{b}$	1.4	1.2	0.61	0.95
$HH \rightarrow b\bar{b}\tau\tau$	2.5	1.6	2.1	1.4
$HH \rightarrow b\bar{b}\gamma\gamma$	2.1	1.8	2.0	1.8
$HH \rightarrow b\bar{b}VV(ll\nu\nu)$	-	0.59	-	0.56
$HH \rightarrow b\bar{b}ZZ(4l)$	-	0.37	-	0.37
combined	3.5	2.8	3.0	2.6
	Combined		Combined	
	4.5		4.0	

- Q: Differences between experiments?
- Q: Where could we gain to reach 5σ ?

◆ Differential/fiducial cross-sections of single-Higgs

- real sensitivity at HL-LHC?
- Q: Complementarity? Assumptions?
- For Run-2, similar sensitivity as HH
- Q: Up to which luminosity?

Low mass is harder to trigger for $b\bar{b}$ and $\tau\tau$ modes

ATLAS 36fb⁻¹ HH summary

- $bbWW$ at 305 x SM!
- Looks pretty hopeless?
- But 139fb⁻¹ $bbWW$
- Dileptonic; previous was single-lepton
- Expected limit 29xSM
- Factor 10 improvement
- Good ideas and hard work can still improve all the results

Back-up

Higgs couplings @HL-LHC

ATLAS						
3000 fb ⁻¹ uncertainty [%]						
		Total	Stat	Exp	SigTh	BkgTh
σ_{ggH}	S1	3.5	0.8	2.1	2.1	1.6
	S2	2.4	0.8	1.7	1.2	1.0
σ_{VBF}	S1	5.5	2.0	2.7	3.7	2.1
	S2	4.2	2.0	2.3	2.2	1.7
