Comparing bipartite entropy growth in open-system matrix product simulation methods

Tuesday, June 13, 2023 2:00 PM (20 minutes)

In this talk I will discuss the “entanglement” entropy growth dynamics in open spin models, comparing different matrix product representations of the many-body density matrix. Recently we discovered mechanisms behind a logarithmic growth of operator entanglement (OE) in XXZ model dynamics subjected to dephasing [1]. I will contrast this behavior to the growth of trajectory entanglement (TE), when the density matrix is unravelled into quantum trajectories [2]. I will further discuss latest advances into entanglement optimized trajectory methods.
