### Proof by Contradiction

How to bound new bosons?

- BSM fermions in generic representation
- Yukawas  $\mathcal{L} \supset -yLHN^c y^cL^cH^{\dagger}N$

3/6

### Proof by Contradiction

How to bound new bosons?

- BSM fermions in generic representation
- Yukawas  $\mathcal{L} \supset -yLHN^c y^cL^cH^{\dagger}N$ 
  - 1. Deviations in hWW and hZZ
  - 2. Instability in RGEs

3/6

### Proof by Contradiction

How to bound new bosons?

- BSM fermions in generic representation
- Yukawas  $\mathcal{L} \supset -yLHN^c y^cL^cH^{\dagger}N$ 
  - 1. Deviations in hWW and hZZ
  - 2. Instability in RGEs
- Vary masses and representations
- Upper bound on  $\Lambda_{\rm B}$

3/6

#### Practical Overview

Three steps:

• Renormalize SM + VLFs  $\longrightarrow \delta \mu_{hVV} \sim f(y, M)$ 

#### Practical Overview

Three steps:

• Renormalize SM + VLFs  $\longrightarrow \delta \mu_{hVV} \sim f(y, M)$ 

• Instability in Higgs quartic,  $d\lambda/d\log\mu \sim -y^4/16\pi^2 \longrightarrow \Lambda_B$ 

(日) (四) (三) (三)

#### Practical Overview

Three steps:

- ► Renormalize SM + VLFs  $\longrightarrow \delta \mu_{hVV} \sim f(y, M)$
- Instability in Higgs quartic,  $d\lambda/d\log\mu \sim -y^4/16\pi^2 \longrightarrow \Lambda_B$
- Experimental constraints (EWPTs, collider)

### Money Plots

イロト イヨト イヨト イヨト

## Money Plots

#### Take-home message:

- Future collider deviation?
- Either light new fermions
- Or new bosons under 100 TeV
