Release of v2.8.0 in November 2023

The screenshot shows the Astro-COLIBRI web interface. At the top, there's a navigation bar with 'Select action' (Latest transients, Cone search), 'Personalize' options, and 'Status: logged out'. Below this is a filter bar for observatories (Swift, Fermi, HAWC, IceCube, AMON, Integral, GECAM, FlaapLUC, LVC, Catalogs, Other) and event types (FRB, Unclassified OT, Classified OT, SN, GRB, burst, neutrino, nuem, GW, 4FGL, TeVCAT, SGR/AXP, IceCat). A date range selector shows '2023-11-02' to '2023-11-17'. The main content area is divided into several panels:

- Left sidebar:** Lists recent events like GRB 231117A (Gamma-ray burst), GRB 231116A (Gamma-ray burst), TXS2013+370 (GeV flare), 3EGJ0433+2908 (GeV flare), and GRB 231115A (Burst).
- Top center:** A 'Custom cone search' panel for TXS2013+370, showing RA/Dec: 303.89° / 37.18°, source: 4FGL J2015.5+3710, and radius: 1°.
- Center:** A large sky map showing a search cone around the target location, with various colored stars representing different observatories.
- Right center:** A 'visibility' graph for 2023-11-17, showing altitude (deg) vs. hours from UTC midnight. It includes data for Sun altitude, Moon altitude, Moon phase, Dark time, and Twilight.
- Bottom right:** A 'Links for further details' section with buttons for ALADIN, ESASky, INS, Fink, and ASAS-SN.
