

Demandes RIKEN + RCNP Osaka

- **Transfer with slowed-down beam
(shape evolution, shell structure, ...)**
- **Clustering away from stability**
- **Lifetime measurements : iDATEN**
- **Nuclear moments**
- **Mass measurements**
- **Study of the Wobbling mode**

Primary beam intensity at RIBF

Beam energies of the beams without explicitly indicated are 345 AMeV.

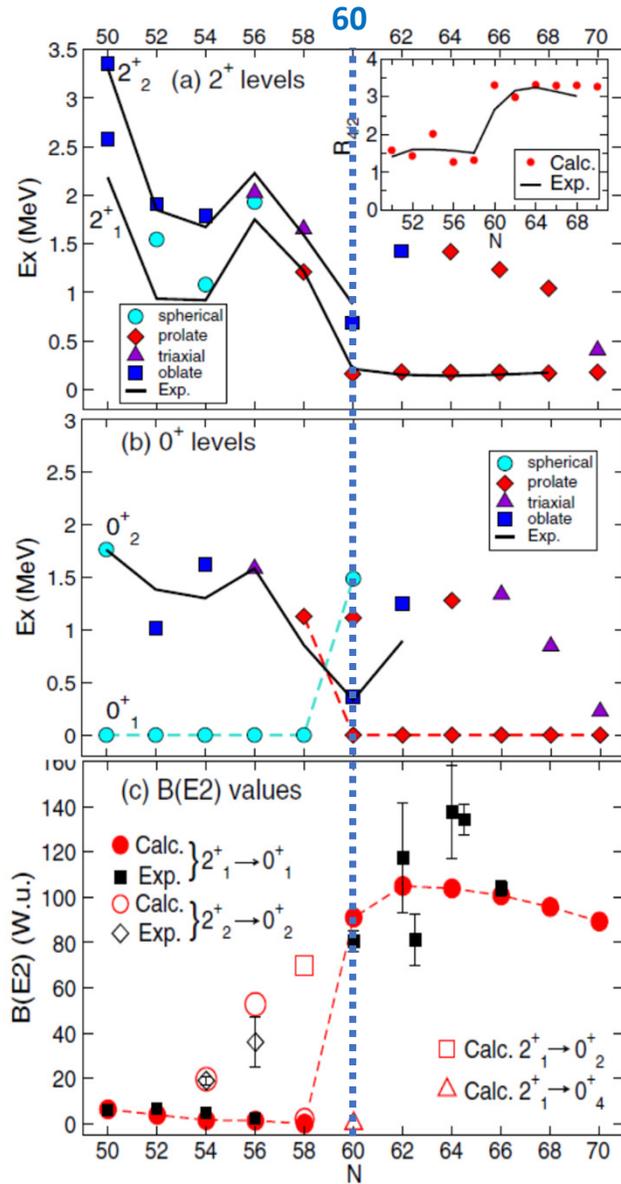

Courtesy of N. Fukunishi (RIBF Acc. gr.)

- Ever increasing intensities
- Limited beam time (3-4 months)

**Context in 2023: issues with the machine
Campaigns postponed twice**

From: S.Franchoo

Physics case at OEDO: shape evolution in Zr isotopes

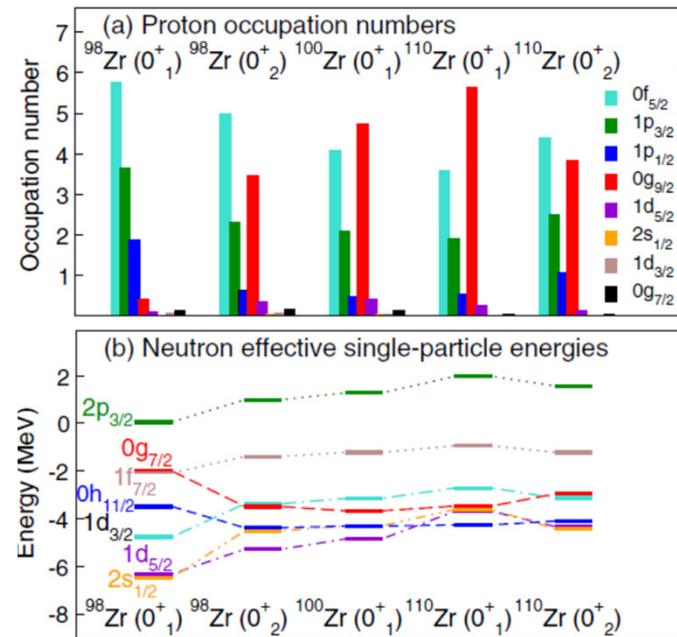

➤ **Drastic changes at N=60 !**

$E(2^+)$, $B(E2)$, ...

Such abrupt change can be identified

to a **Quantum Phase Transition**

Strong occupation of the $\pi g_{9/2}$ -

⇒ Lower neutron $\nu g_{7/2}$ and $\nu h_{11/2}$

Type II shell evolution

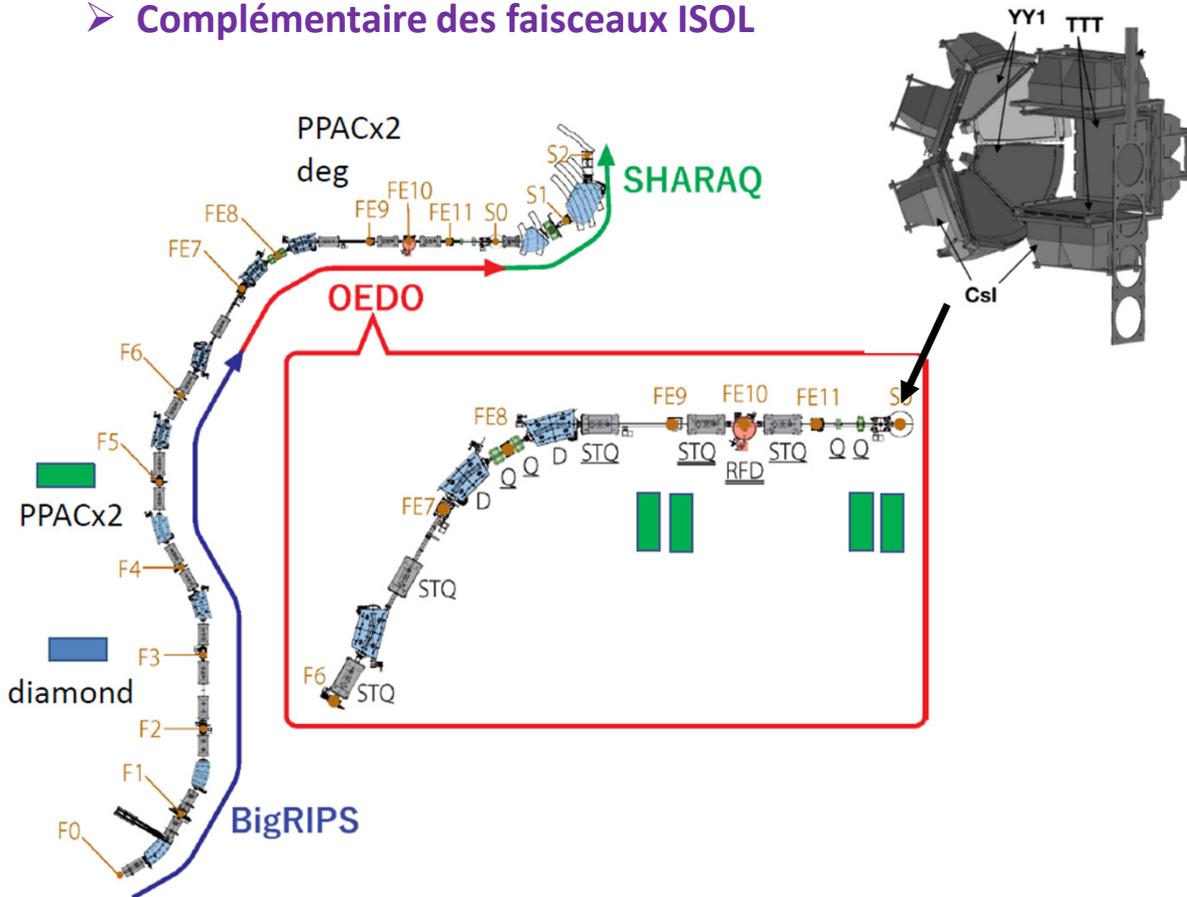

T.Togashi et al., PRL 117 (2017)

Plan : use pair transfer reaction

RIKEN – OEDO

Réactions de transfert avec des faisceaux ralentis

➤ Complémentaire des faisceaux ISOL

- Particle detection (Si) : TiNA
- Issue of gamma detection (under discussion)
option: 2 Quads (Gretina) + 18 GRAPE
NB: thick Si of GRIT may help

First experiments in 2022

$^{56}\text{Ni}(d,p)$ and $^{130}\text{Sn}(d,p)$ for astrophysics

2024

- Participation to $^{82}\text{Zr}(p,t)^{80}\text{Zr}$ (shape coexistence)
Spokesperson: J.Hwang (Daejeon)
- Proposition $^{102}\text{Zr}(p,t)$ Transition de phase

AP request 2024:

- Mission exp (2p/10j) 5k€

Collaboration: **IJCLab, RIKEN, Hong Kong U., RCNP Osaka, TI Tech, LPC Caen, Tohoku U. CEA Saclay, Kyoto U., TU Darmstadt, NIPNE Bucharest, Kyushu U.**

TOGAXSI (戸隠) telescope

A new detector array for *inverse-kinematics* cluster and nucleon knock-out reaction experiments under construction.

From: T.Uesaka ~ 500 mm

All the detectors are placed in a vacuum to avoid multiple-scattering in materials

ONOKORO Program
For medium/heavy nuclei
(T.Uesaka, J.Zenihiro)

- RCNP & HIMAC
(Stable isotopes)
- RIKEN
(Unstable nuclei)

To be completed by 2023 summer.

Experiments are planed:

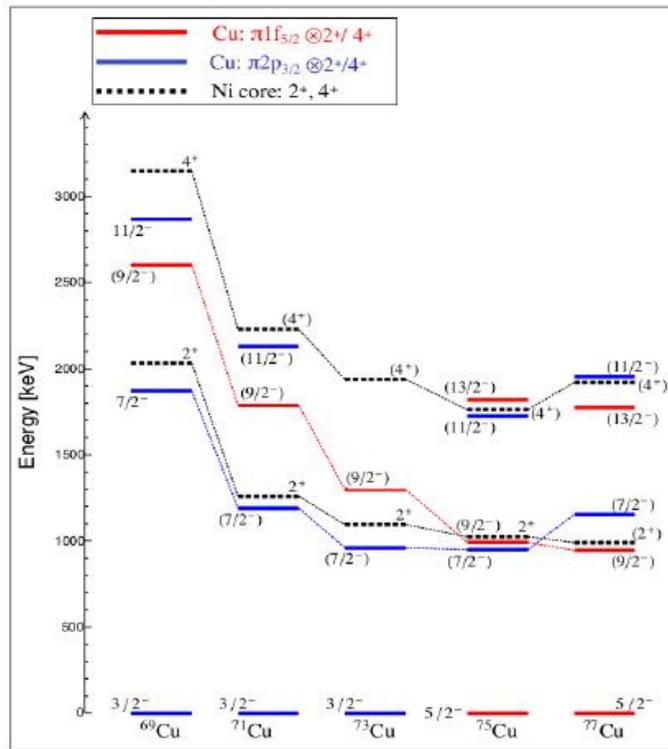

Ca, Ar isotopes in 2023—

Sn, Xe isotopes in 2024—

Pb, Th isotopes in 2025—

Lifetimes in $^{75,77}\text{Cu}$ with Idaten

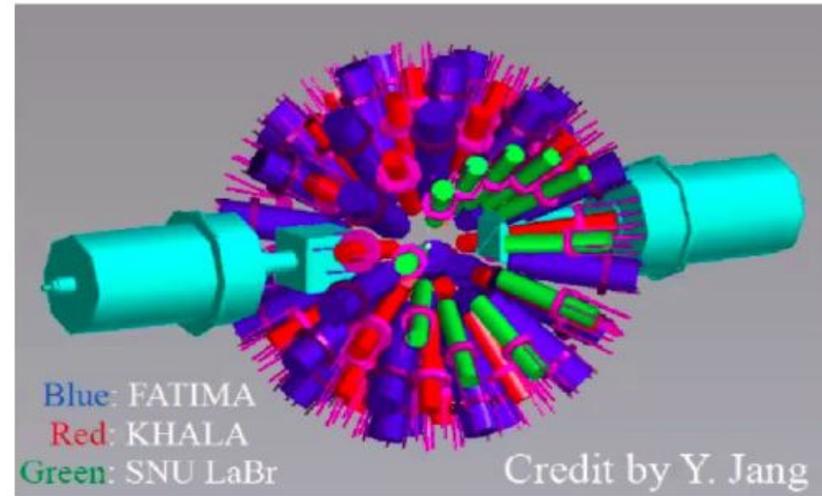

Emergence of collectivity in copper isotopes: halflives of particle-core vs intruder states

F Bello Garrote et al, PRC 102 (2020)

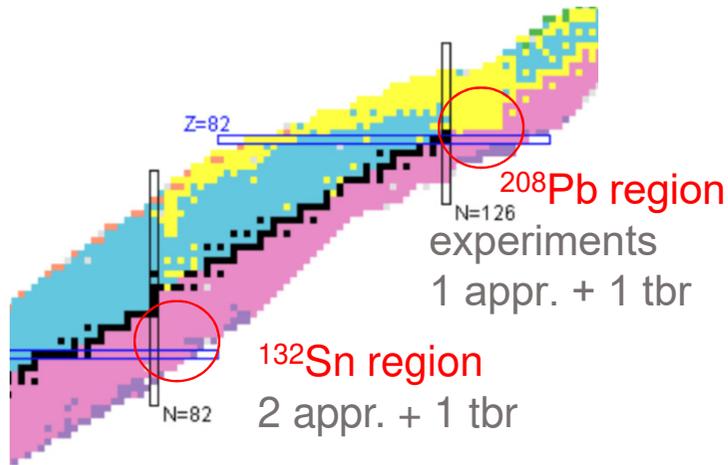

Idata (84 LaBr from Fatima & Khala, 2023):
 $^{75,77}\text{Cu}$, proposal 2022

Hicari (Miniball+RCNP+LBNL+IMP, 2020-21):
 ^{79}Cu , thèse de M Kaci (2021-2024)

2024: experiment submission

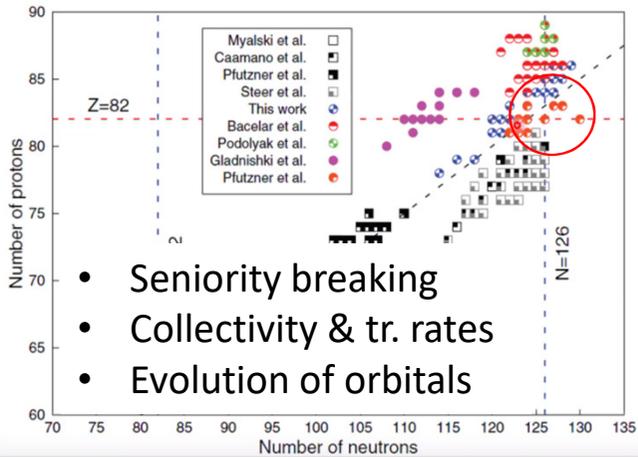

Isomer, lifetime and decay measurements around ^{132}Sn and ^{208}Pb with IDATEN

Bowry et al., Phys. Rev. C 88, 024611 (2013)

Caballero et al., Phys. Rev. C 95, 064322 (2017)

Phong et al., Phys. Rev. Lett. 129, 172701 (2022)

- Seniority breaking
- Collectivity & tr. rates
- Evolution of orbitals

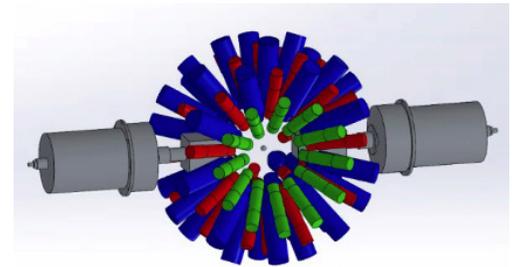

- 84 $\text{LaBr}_3(\text{Ce})$ scintillator detectors
- Two Clovers HpGe
- WASABI DSSSD for $\beta\gamma$ -correlation

- **New studies of lifetimes on short-lived states in the ^{208}Pb region within the IDATEN to be requested to PAC**
- **New studies of lifetimes on short-lived states in the ^{132}Sn region within the IDATEN to be requested to PAC**

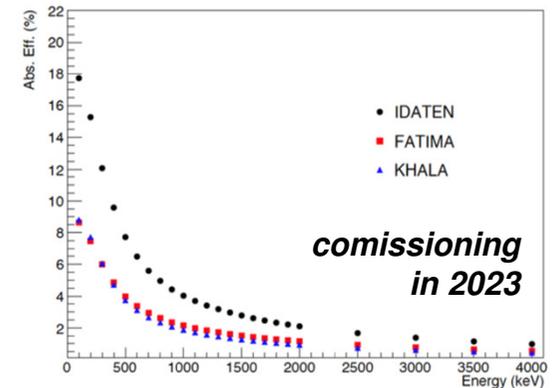

- *Cd-Ag-Pd lifetime meas. $N\sim 82$ (appr. 7.5 d)*
- *^{132}Sn decay & lifetime & masses $N>82$ (5 d)*
 β -decay station + MRTOF
- *Isomers beyond $N=126$ ^{208}Pb region (5 d)*

AP request 2024:

$A>132, A>208$ experiments: 8.5 k€

with IDATEN in 2024

2 travels /2 pers. /2x7 days

IJCLab: R.Lozeva, V.Piau, NEXT (2/3 pers.)

Nuclear moments of isomeric states @ RIKEN

➤ Long-standing fruitful collaboration with the group of H. Ueno – since 2008

Y. Ichikawa, ..., G.Georgiev, et al. Nature Phys. 15,321 (2019)

F.Boulay, ..., G.Georgiev, ..., R.Lozeva, et al. PRL 124, 112501(2020)

• Double fragmentation:
Nature Physics 8, 918 (2012)

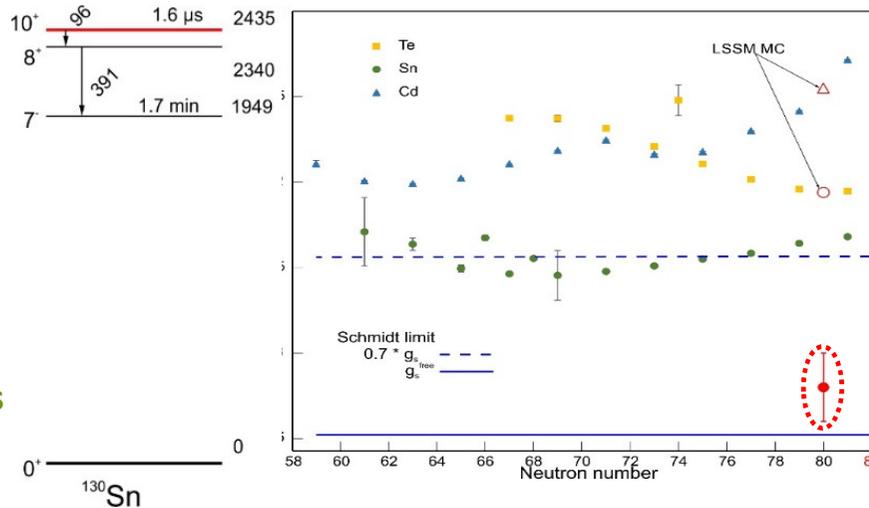

➤ Accepted proposal on 10^+ isomer in ^{130}Sn (2019, spokesperson: G.Georgiev)

December 2018 - TDPAD study of the 10^+ isomer in ^{130}Sn

TDPAD setup:

- plastic scintillator (t=0)
- 4 Ge (LE) + 2 LaBr₃ detectors
- magnetic field B=150 mT

• Unexpected experimental value obtained with very poor statistics.

• Requires a confirmation beyond any doubt.

⇒ New proposal accepted by the RIKEN PAC in December 2019 (G.Georgiev)

➤ Newly accepted proposal ^{132}Sn (2022, spokesperson: G.Georgiev)

TDPAC technique for short-lived isomers (few ns ~ usec) – similar setup

Request for 2024

- Missions: 4p (PhD student + SDF researchers) = 8 weeks → 15 k€

- furnitures: transport of 4 Ge detectors to RIKEN and back → 6 k€

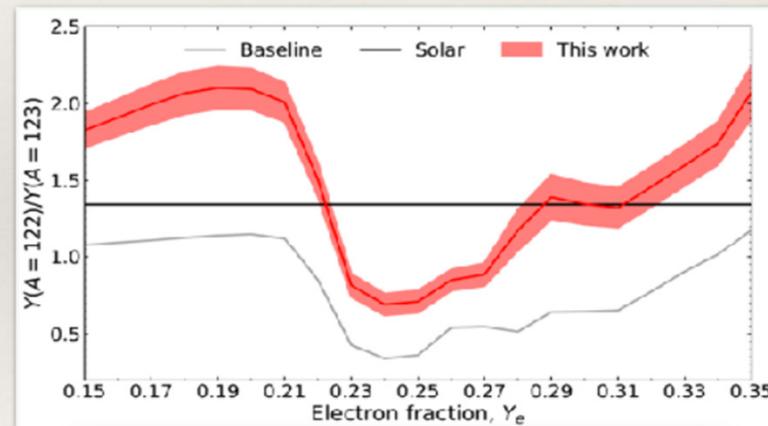

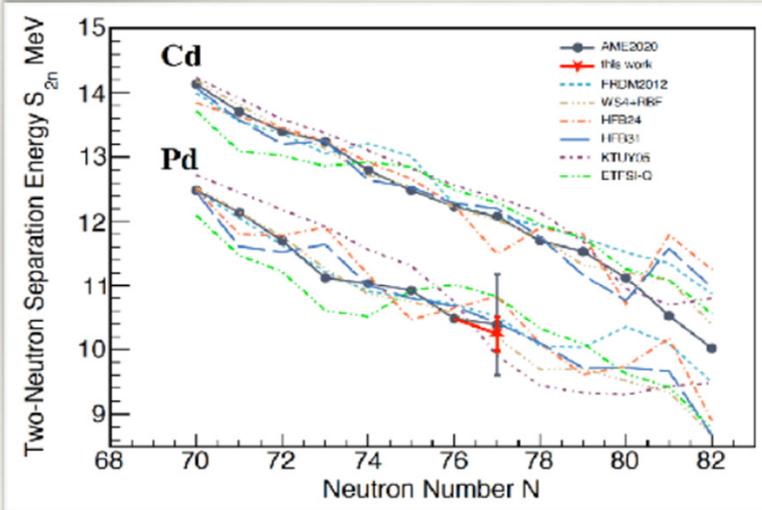

TOTAL : 21k€

Mass measurements at R3 - RIKEN

PHYSICAL REVIEW LETTERS 128, 152701 (2022)

First Application of Mass Measurements with the Rare-RI Ring Reveals the Solar r -Process Abundance Trend at $A = 122$ and $A = 123$

H. F. Li,^{1,2,3,4} S. Naimi,^{3,*} T. M. Sprouse,⁵ M. R. Mumpower,⁵ Y. Abe,³ Y. Yamaguchi,³ D. Nagae,^{3,†} F. Suzuki,^{3,‡} M. Wakasugi,³ H. Arakawa,⁶ W. B. Dou,⁶ D. Hamakawa,⁶ S. Hosoi,⁶ Y. Inada,⁶ D. Kajiki,⁶ T. Kobayashi,⁶ M. Sakaue,⁶ Y. Yokoda,⁶ T. Yamaguchi,⁶ R. Kagesawa,⁷ D. Kamioka,⁷ T. Moriguchi,⁷ M. Mukai,^{7,8} A. Ozawa,⁷ S. Ota,^{8,||} N. Kitamura,⁸ S. Masuoka,⁸ S. Michimasa,⁸ H. Baba,³ N. Fukuda,³ Y. Shimizu,³ H. Suzuki,³ H. Takeda,³ D. S. Ahn,^{3,9} M. Wang,¹ C. Y. Fu,¹ Q. Wang,¹ S. Suzuki,¹ Z. Ge,^{1,¶} Yu. A. Litvinov,¹⁰ G. Lorusso,^{11,12} P. M. Walker,¹² Zs. Podolyak,¹² and T. Uesaka³

The abundance ratio of mass $A=122$ and 123 can be better reproduced with new mass of 123Pd measured at RIBF with the Rare-RI Ring.

Mass measurements at R3 - RIKEN

New type of Schottky detector is being developed in collaboration with GSI and RIKEN. The aim is to improve the current precision of the mass measurement at the rare-RI ring.

- Detector will be installed at RIKEN early 2024
- First test experiment planned for spring 2024

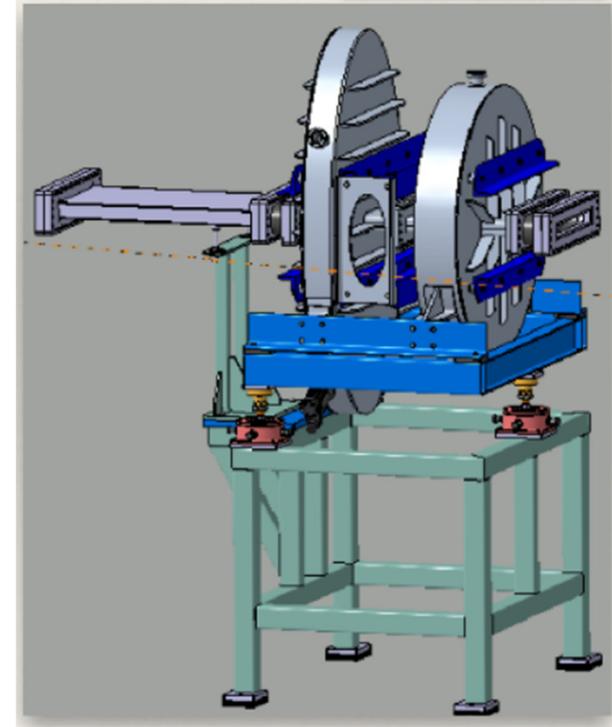

Mass Measurements with the Rare-RI Ring and using the new detector is planned in the fall of 2024

The experiment will focus on mass measurements of $N=Z$ nuclei for the rp -process

2024 request:

▪ Test of the new detector	1p/7j
▪ Experiment	1p/14j
Total	5k€

Linear Polarization Measurement in ^{137}Sm , ^{137}Pm : search new Wobbling Bands at RCNP - Osaka

Spokespersons: *S. Guo (IMP Lanzhou) and C. M. Petrache (IJCLab Orsay)*

In-beam gamma spectroscopy via the reaction $^{36}\text{Ar}+^{105}\text{Pd}$

CAGRA : 16 Clovers:
High efficiency ~ 5%
8 Clovers @ 90°:
Perfect sensitivity for
Linear pol. measurements
Fast digital DAQ system:
High triggering rate for
3-fold coincidence events ~20k/s

IMP Lanzhou CsI ball:
To select diff. emission channels

Participants IJCLab: A.Astier, C.Petrache, PhD student

Pluri-annual program on Lanthanides region

Related program at iThemba Labs on the Wobbling mode (in Ce and Ba)

AP request for 2024:

- Furniture/Equip. 1k€
- Mission exp 3p/7j 7k€
- informatique 1k€

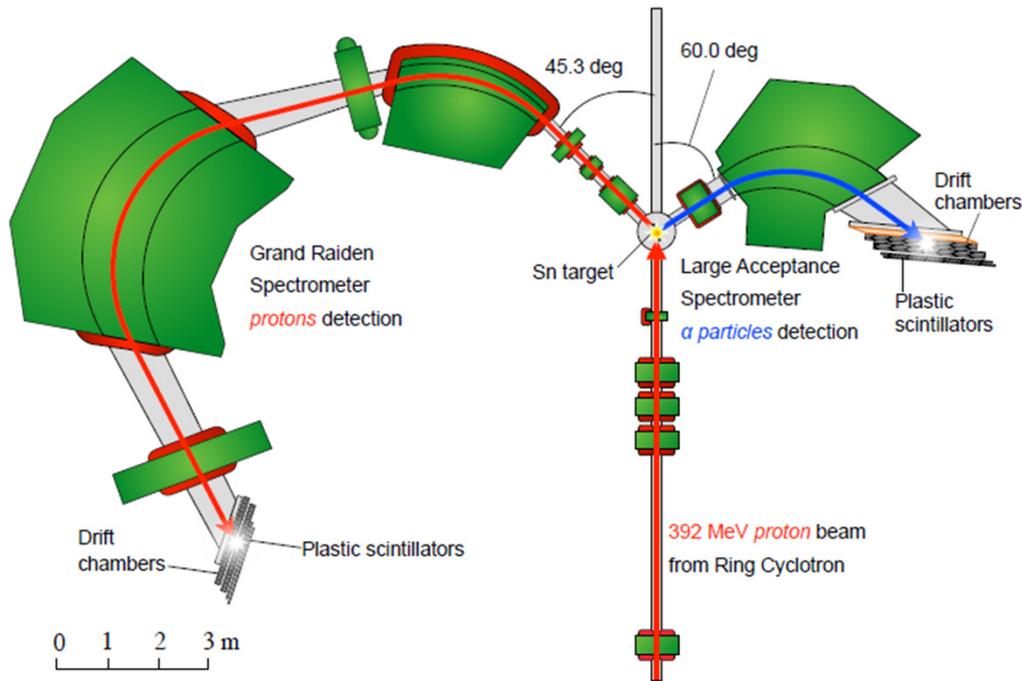

Collaboration: IJCLab, IMP Lanzhou, RCNP Osaka
